

TEST REPORT

TEST OF A NON-CATALYTIC WOOD BURNING FIREPLACE FOR EMISSIONS AND EFFICIENCY

PER EPA METHODS 28R AND ASTM E2515 and ASTM E2780, MAY 2015

Client:

Foyers Suprême

3594 Rue Jarry E,

Montréal,

QC H1Z 2G4

Model Name: 22-IN

Attention: Rafael Sanchez

TESTED BY:

Services Polytests inc.

695-B Gaudette

St-Jean-sur-Richelieu, QC, J3B 7S7

TEST DATES: June 12th to 21st 2023

REPORT DATE: July 5th 2023

Revision 1: September 25th 2024

Project number: PI-20291

All services undertaken are subject to the following general policy: Reports are submitted for exclusive use of the clients to whom they are addressed. This document may not be reproduced except in its entirety without the written permission from Services Polytests Services Polytests have not been involved in any R&D design consulting regarding this unit as requested by the NSPS. Results only apply to samples submitted to test.

Revision list:

Revision 1 September 25th 2024:

- Update section 3.1 & 1.4 additional information that the aging was done at medium heat draw
- Table 2.5 updated to include dilution tunnel velocity in ft/min
- More details included in appendix 12 for fuel length from the trapezoidal shape of the firebox

List of appendixes

- APPENDIX 1: Raw data, forms and results
- APPENDIX 2: Proportionality results
- APPENDIX 3: Calibration data
- APPENDIX 4: Unit pre burn

1 INTRODUCTION

1.1 GENERAL

Laboratory

- Location: Services Polytests Inc., 695-B Gaudette St-jean-sur-Richelieu QC, Canada J3B 7S7
- Elevation: 100 feet above sea level

Test program

- Purpose: unit qualification NSPS 2020
- Test dates: June 12th to 21st 2023
- Test methods used:
 - Particulate emissions: ASTM E2780-10; ASTM E2515-11 methods 28R as referred into 40 CFR Part 60 Subpart AAA
 - Efficiency: CSA B415.1-10

1.2 TEST UNIT INFORMATION

General

- Manufacturer: Foyers Suprême inc.
- Product type: non-catalytic wood Insert
- Combustion system: non-catalytic
- Unit tested: 22-IN

The engine will have the model number of 22IN, which comprises the standard components related to the combustion of the unit (such as the firebox, the controls, and the baffle system). The engine will however have an optional firebox lining; either with soapstone (model name: **Lumis 22 – Soapstone**, **Regal 22 – Soapstone**, **Flair 29**) or cast iron (model name: **Lumis 22 - Cast Iron**, **Regal 22 – Cast Iron**). The 22IN models are insert fireplaces with aesthetic differences.

In Summary:

- **Lumis 22 - Soapstone**: Insert fireplace with a rectangular door/façade and a soapstone firebox lining.
- **Regal 22 - Soapstone**: Insert fireplace with an arched door/façade and a soapstone firebox lining.
- **Lumis 22 – Cast Iron**: Insert fireplace with a rectangular door/façade and a cast iron firebox lining.
- **Regal 22 – Cast Iron**: Insert fireplace with an arched door/façade and a cast iron firebox lining.
- **Flair 29**: Insert fireplace with an optional door/façade (arched or rectangular) and a soapstone firebox lining.

1.3 RESULTS

Emission results obtained

- Weighted Average Emissions Rate: 1,3 g/hr
- Weighted Average Overall Efficiency: 67 %

Conformity: NSPS Phase 2020

1.4 PRETEST INFORMATION

- Unit condition: The unit was received by carrier June 2023 in good condition. The 50hrs of aging was done by the manufacturer at medium heat draw. Fuel: BC FIR between 19% and 25%. (All data in Appendix 4).

Set up

- Venting system type: 5-inch steel pipe and insulated chimney
- System height from floor: 15 feet
- Particularities: Convection fan installed on all units

2 SUMMARY OF TEST RESULTS

2.1 EMISSIONS

Run Number	Test Date (YY-MM-DD)	Emission Rate (g/hr)	Burn Rate (kg/hr)	1st hour Emission Rate (g/hr)	CSA B415.1 CO emission Gr/hr	CSA B415.1 emission Gr/Mj	Heat output (BTU/HR)	(OHE) % HHV

6	1,556	522,05	19,9	0,012	0,200	3/4 open	184

*Run 1 has been rejected due to failing of the temperature differential criteria (+-126F), Table 2.7 ASTM 2780 Section 9.5.10 Wood heater thermal equilibrium

3 PROCESS DESCRIPTION

3.1 DISCUSSION

The heater has been received in a good shape by a carrier in June 2023. Pre-burn was done by the manufacturer as preliminary testing with crib wood at medium heat draw. The wood heater is equipped with a bi-metallic variable burn rate controller. The side walls of the combustion chamber are lined with either cast iron panels or soapstone slabs, allowing for a longer burn at a more uniform heat output. In addition, the casing of the combustion chamber is constructed out of stainless steel, allowing for a quick heat transfer. For the purpose of increasing the efficiency, a blower is installed into the unit.

3.2 UNIT DIMENSIONS

Baffle

- Location: between top of combustion chamber and hearth
- Dimensions: covers the hearth area minus the restriction at front
- Material: Stainless steel baffle

Bricks

- Cast iron surrounding firebox, optional soapstone

Flue gas exhaust

- Location: top flue
- Dimensions: 5 in. diameter
- Material: Steel

Gasket

The door of the unit consists of three sections of gaskets, where 2 of them are holding the glass (SGI-260-0230) and 1 is sealing around the door onto the firebox (SGI-265-0125). Please refer to page 75 of 22IN – MASTER DWG.pdf for information on dimensions, materials, and assembly details. Technical specification of the SGI-260-0230 and the SGI-265-0125 can be found in the DATA – Knitted Fiberglass Rope.pdf document.

Overall unit dimension

- Firebox dimensions: 14 ¼ in. at back to 17 ¾ in. at front wide x 15 ¼ in. deep x 13 ¾ in. high
- Usable volume: 1.91 cuft
- Overall wood heater dimension: 31-inch-wide x 20 ½ -inch-deep x 22 ¼ high

Convection fan

- tangential fan (Ebm-Papst, part num. RG 125-19/06) supplied with unit see appendix 6 for all detail

Catalyst

- none

Bi-metallic combustion air control**PRIMARY AIR CONTROL**

The Primary Air Control is a patented mechanism (Patent No: US 7,325,541 B2) that regulates the air flow into the firebox based on the temperature of the unit. It is located on the top of the firebox, at the front center of the unit. The combustion air control of the 22IN has two components: the Activator and the Burn Rate Selector. The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow a primary source of air to enter the firebox. The Activator will retract automatically with heat. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set. Please refer to page 37 to 45 of 22IN – MASTER_DWG.pdf for details on the Primary Air Control assembly. The sub-sections below illustrate the fully open, high burn rate, medium burn rate, and low burn rate primary air control settings used for official emissions testing.

SECONDARY BAFFLE

The baffle system of the 22IN comprises of a horizontal plate shooting secondary air through a series of holes. The plate consists of 55 holes (46 vertical + 9 horizontal) of 0.115" diameter, with a higher concentration located at the front (towards the door). Note that the 5.45" diameter hole at the back center is blocked during operation by the chimney sweeping. Refer to page 14 to 19 of 22IN – MASTER_DWG.pdf.

3.3 AIR SUPPLY SYSTEM

Description

- Primary air: window wash design with air intake at the top of unit
- Secondary air: secondary baffle design with air intake at the top of unit. Refer appendix 6 for drawing details

Characterization

The following table shows the inlet and outlet sections of each system. The air introduction system number is referred to on a set of drawings in Appendix 6.

AIR INTRODUCTION SYSTEM		INLET (1) sq. in.			OUTLET (sq. in.)
Identification	Type	Imin	Imax	Controlled	
A *	Primary	0 in ²	1.14 in ² – Max Position 4.09 in ² - Fully Open	Yes	4.06 in ²
B *	Secondary	1.67 in ²	1.67 in ²	No	0.57 in ²
C *	Pilot	N/A	N/A	No	-

* This section would be filled by measuring and comparing with the manufacturer’s drawings included in the test report.

Legend

Identification: Tag name referred to on drawings in Appendix 14, section airflow pattern

Type: Characterization of air intake

Imin: Minimum air intake of a particular air channel

Imax: Maximum air intake of a particular air channel

Controlled: Determines if a provision for air control is present

Outlet: Total air outlet of a particular air channel

3.4 OPERATION DURING TEST

All runs have been found appropriate, no anomalies happened and all runs below have been validate and found compliant except for run 1 failed on temperature differential criteria (*ASTM 2780 Section 9.5.10 Wood heater thermal equilibrium*). the Run 5 (maximum) resulted in a smaller burn rate than Run 6 (medium - approx. 90% open with respect the maximum position).

Run #1

This run was performed on June 12th 2023. It lasted 532 minutes and a category 1 burn rate was obtained at 0.54 kg/hr & emission at 0.90 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was fully closed at the minimum setting. This test failed on Delta T criteria at -213°F. failed on temperature differential criteria (*ASTM 2780 Section 9.5.10 Wood heater thermal equilibrium*).

Run #2

This run was performed on June 13th 2023. It lasted 347 minutes and a category 2 burn rate was obtained at 0.83 kg/hr & emission at 0.75 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was fully closed at the minimum setting, the burn rate for the low burn rate category was no greater than the rate that an operator can achieve in home use.

Run #3

This run was performed on June 14th 2023. It lasted 359 minutes and a category 2 burn rate was obtained at 0.81 kg/hr & emission at 1.05 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was fully closed at the minimum setting, the burn rate for the low burn rate category was no greater than the rate that an operator can achieve in home use.

Run #4

This run was performed on June 15th 2023. It lasted 269 minutes and a category 2 burn rate was obtained at 1.09 kg/hr & emission at 1.06 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was half way between maximum and minimum setting. The manufacturer was aiming for a category 3 burn rate but this test ends up into a category 2. A re-test will be done with the air damper $\frac{3}{4}$ open to achieve the category 3 (run6).

Run #5

This run was performed on June 20th 2023. It lasted 205 minutes and a category 3 burn rate was obtained at 1.44 kg/hr & emission at 1.79 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was fully open at the maximum setting the entire test from the ignition.

Run #6

This run was performed on June 21st 2023. It lasted 184 minutes and a category 3 burn rate was obtained at 1.56 kg/hr & emission at 1.84 gr/hr. The convection fan was at on position during the entire test. The air inlet damper was half $\frac{3}{4}$ open from the minimum setting. This test ends up with a slightly faster burn rate than maximum burn, this could happen with this type of appliance with a bi-metallic control for air damper. It is possible that a Category 3 run with an air control setting near the maximum position may burn quicker (larger burn rate) than a Maximum air control setting run due to the many factors effecting the operation of a wood heater, such as: Humidity level of the load, Density of the load, Atmospheric pressure, or Humidity level in the air.

- Details: Refer to the front page of each test run data sheets found in appendix for the detailed test sequence showing air supply settings and adjustments, fuel bed adjustments and operational specifics of the test unit.

Test fuel cribs

- Type of wood: Douglas fir, grade c or better, 19 to 25% dry basis moisture content
- Description: for each test, description of the fuel crib is found on the front page of each test run data sheet together with photograph in appendix.

3.5 START-UP OPERATION

The complete manufacturer's firing procedure of each burn rate category is fully described in appendix 13.

3.6 SAMPLING LOCATIONS

Particulate samples are collected from the dilution tunnel. The tunnel has two elbows ahead of the sampling section. The sampling section is a continuous 6-inch diameter pipe straight over its entire length. Tunnel velocity pressure is determined by a standard pitot tube, thermocouple is installed on the pitot tube to measure the dry bulb temperature. MC is assumed, as allowed, to be 2%. Tunnel samplers are located downstream of the pitot tube and upstream from the end of this section. All detail of dilution tunnel can be found in appendix 8.

3.7 DRAWINGS

Various drawings of the stack gas sampling train and of dilution tunnel system are found in Appendix 6.

3.8 EMISSIONS EFFICIENCY TESTING EQUIPMENT LIST

The complete test equipment list together with all corresponding calibration data can be found in Appendix 3.

4 SAMPLING METHODS

4.1 PARTICULATE SAMPLING

Particulates were sampled in strict accordance with ASTM E2515. This method uses two identical sampling systems with Gelman A/E 61631 binder free (or equivalent), 47 mm diameter filters. The dryers used in the sample systems are filled with "Drierite" before each test run.

5 QUALITY ASSURANCE

5.1 INSTRUMENT CALIBRATION

5.1.1 GAS METERS

At the conclusion of each test program the gas meters are verified using the reference dry gas meter. This process involves sampling the train operation for 1 cubic foot of volume. With readings made to .01 fr', the resolution is 1 %, giving an accuracy higher than the 2% required by the standard.

5.1.2 SCALES

Before each test program, the different scales used are checked with traceable calibration weights to ensure their accuracy.

5.1.3 GAS ANALYZERS

The continuous analyzers are zeroed and spanned before each test with NBS traceable gases. A mid-scale multi-component calibration gas is then analyzed (values are recorded). At the conclusion of a test, the instruments are checked again with zero, span and calibration gases (values are recorded only). The drift in each meter is then calculated and must not exceed 5% of the scale used for the test.

5.2 TEST METHOD PROCEDURES

5.2.1 LEAK CHECK PROCEDURES

Before and after each test, each sample train is tested for leaks. Leakage rates are measured and must not exceed 0.02 CFM or 4% of the sampling rate. Leak checks are performed checking the entire sampling train. Pre-test and post-test leak checks are conducted with a vacuum of 5 inches of mercury. Vacuum is monitored during each test and the highest vacuum reached is then used for the post-test vacuum value. If leakage limits are not met, the test run is rejected. During these tests, the vacuum is typically less than 2 inches of mercury. Thus, leakage rates reported are expected to be much higher than actual leakage during the tests.

5.2.2 TUNNEL VELOCITY FLOW MEASUREMENT

The tunnel velocity is calculated from a center point pitot tube signal multiplied by an adjustment factor. This factor is determined by a traverse of the tunnel as prescribed in EPA Method 1. Final tunnel velocities and flow rates are calculated from EPA Method 2, Equation 6.9 and 6.10. (Tunnel cross sectional area is the average from both lines of traverse.)

Pitot tubes are cleaned before each test and leak checks are conducted after each test.

5.2.3 PM SAMPLING PROPORTIONALITY (ASTM E2515)

Proportionalities were calculated in accordance with ASTM E2515. The data and results are found in appendix.

POLYTESTS

TESTING THROUGH YOUR REALITY

Date: 2023-06-15 Manufacturer: foyer supreme Model: 22in
 Project #: PT 2022 Run: 4 Tech: MP Reviewer: DO

- Preload ~~462~~ 162 LBS start fan (with fine starter)
- After 3 min close Door
- At 1300 LBS open Fan (High)
- At 900 LBS close air inlet (by metal)
- At 82 LBS Rack coal Bed
- At 75 LBS close air inlet manually (1/2 open)
- At 400 LBS Rack coal Bed
- At 200 LBS instant load
- close Door immediately

Description du test

Test standard	EPA
Run #	5
Date	20-06-2023
Technicien	m.m
Project #	pi 20291

Description de l'unité

Manufacturier	supreme	
Modèle	221N	
Combustion system	Non-Cat	
Appliance type	fireplace	
Firebox volume	1,91	cu ft.
Appliance weight empty	n.a	lbs
Appliance weight full	n.a	lbs

Paramètres du test

Logging time	1	min
Manufacturer's rated heat output	n.a	BTU/h Donnée fournie par le manufacturier
Targeted category	1	
Targeted output	n.a	BTU/h
Cp steel	n.a	BTU/lb-°F

Échantillonnage

Blank sampling rate	0,20	cuft/min
Internal probe diameter	0,18	in.
Calibration Factor (DGM #1):	1,000	Dimensionless
Equipment number (DGM #1):	EM 178	
Calibration Factor (DGM #2):	1,006	Dimensionless
Equipment number (DGM #2):	EM 318	
Calibration Factor (DGM #3):	1,003	Dimensionless
Equipment number (DGM #3):	EM 179	Dimensionless
Calibration Factor (DGM 1st Hr):	0,999	
Equipment number (DGM 1st Hr):	EM 130	

Tunnel

Targeted tunnel flow rate	140	scfm
Tunnel diameter	6	in.
Molecular weight	29	29 as per ASTM E2515
Pitot tube type	Standard	
Pitot tube coefficient	0,99	Dimensionless

Project nu.	pi 20291
Date	20-06-2023
Technicien	M.M

Certificate Date:	2023-05-11

CALIBRATION CONFORMITY		
	Before	After
Compliant:	X	X
Non Compliant:		

- Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025:2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- Reported uncertainties represent a 95 % of confidence level assuming a normal distribution $k=2$.
- The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- The results presented in this certificate relate only to objects subject to calibration.
- It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

- Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- The results presented in this certificate relate only to objects subject to calibration.
- It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

1	210 g	0.0001 g

Procedure

Calibration Guideline: ASTM E898 - 20
METTLER TOLEDO Work Instruction: 30260953

This calibration certificate contains measurements for As Found and As Left calibrations.

The sensitivity/span of the weighing instrument was adjusted before As Left calibration with an external weight. As Left 200g

	Temperature		Humidity	
	Start	End	Start	End
As Found	25.0 °C	25.0 °C	63.0 %	63.0 %
As Left	25.5 °C	25.5 °C	63.0 %	63.0 %

Environmental conditions have been verified to ensure the accuracy of the calibration.

This certificate is issued in accordance with the conditions of accreditation granted by A2LA, which is based on ISO/IEC 17025. A2LA has assessed the measurement capability of the laboratory and its traceability to recognized national standards.

As Found Calibration Date: 30-05-2023 Authorized A2LA Signatory:
As Left Calibration Date: 30-05-2023
Issue Date: 30-05-2023

○ As Found

◆ As Left

For improved legibility of the graphics only increasing measurement points are shown and measurement points close to zero are not displayed.

The uncertainty stated is the expanded uncertainty at calibration obtained by multiplying the standard combined uncertainty by the coverage factor k – which can be larger than 2 according to EURAMET cg-18. The value of the measurand lies within the assigned range of values with a probability of approximately 95%.

The user is responsible for maintaining environmental conditions and the settings of the weighing instrument when it was calibrated.

Test Equipment

All weights used for metrological testing are traceable to national or international standards. The weights were calibrated and certified by an accredited calibration laboratory.

Weight Set 1: OIML E2

Weight Set No.:	481	Date of Issue:	13-07-2022
Certificate Number:	220595315-1	Calibration Due Date:	31-07-2023

Remarks

Equipment condition: Fair
unit is ready for use

End of Accredited Section

The information below and any attachments to this calibration certificate are not part of the accredited calibration.

Measurement Uncertainty of the Weighing Instrument in Use

Stated is the expanded uncertainty with k=2 in use. The formula shall be used for the estimation of the uncertainty under consideration of the errors of indication. The value R represents the net load indication in the unit of measure of the device.

Temperature coefficient for the evaluation of the measurement uncertainty in use: $3.0 \cdot 10^{-8} / K$

Temperature range on site for the evaluation of the measurement uncertainty in use: 4 K

Linearization of Uncertainty Equation

	Range		As Found	As Left
	d	Max		
1	0.0001 g	210 g	$U_1 = 0.10 \text{ mg} + 0.0180 \text{ mg/g} \cdot R$	$U_1 = 0.10 \text{ mg} + 0.00811 \text{ mg/g} \cdot R$

To optimize the stability of the linearization, besides of the zero load only increasing measurement points with a test load of 5% of the measurement range or larger are taken for the calculation of the linear equation.

Absolute and Relative Measurement Uncertainty in Use for Various Net Indications (Examples)

Net Indication	As Found		As Left	
	Value	Relative	Value	Relative
0.0210 g	0.10 mg	0.48%	0.10 mg	0.48%
0.2100 g	0.10 mg	0.049%	0.10 mg	0.048%
2.1000 g	0.14 mg	0.0068%	0.12 mg	0.0056%
21.0000 g	0.48 mg	0.0023%	0.27 mg	0.0013%
210.0000 g	3.9 mg	0.0018%	1.8 mg	0.00086%

As Found

As Left

Custom Tolerance Assessment

Assessment done without considering measurement uncertainty.

One or more of the measurements from the attached calibration certificate were assessed against customer-defined tolerances.

NOTES:

For weight calibration, we use the procedure "Comparaison individuelle" PDL-09-MG-001 and the procedure "Détermination des incertitudes" PDL-09-MG-002. This certificate cannot be copied without written approval from Dispersion Laboratory. The results presented in these pages relate only to objects subjected to calibration.n

BALANCES

The following balances are used for calibration purposes :

> 5 kg to 25 kg :	Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g
> 1 kg to 5 kg :	Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g
> 300 g to 2 kg :	Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg
> 100 g to 200 g :	Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg

We are also using these balances in our automated procedure :

> 200 g to 1 kg :	Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Procedure

Instruction de Calibration: ASTM E898 - 20
Instruction de travail METTLER TOLEDO: 30260953

This calibration certificate including procedures and uncertainty estimation also complies with EURAMET cg-18 v 4.0.

Ce certificat de calibration contient des mesures pour la calibration Tel que Trouvé. Aucune calibration Tel que Laissé n'a été effectuée puisque l'appareil n'a pas été modifié suite à la calibration Tel que Trouvé. Par conséquent, les résultats Tel que Laissé correspondent aux résultats Tel que Trouvé.

The calibration was agreed with the user below the maximum capacity of the balance.

	Temperature	
Tel que Trouvé	Start: 20.0 °C	End: 22.0 °C

Environmental conditions have been verified to ensure the accuracy of the calibration.

This certificate is issued in accordance with the conditions of accreditation granted by A2LA, which is based on ISO/IEC 17025. A2LA has assessed the measurement capability of the laboratory and its traceability to recognized national standards.

3	70.05 kg	N/D
4	70.00 kg	N/D
5	69.95 kg	N/D

Déviatoin Maximale	0.05 kg	N/A
--------------------	---------	-----

Tel que Trouvé

The "d" in the graph represents the readability of the range/interval in which the test was performed.

Erreur d'indication

Tel que Trouvé

	Reference Value	Indication	Erreur d'Indication	Incertitude Élargie	k
1	0 kg	0.00 kg	0.00 kg	0.029 kg	2
2	30 kg	30.00 kg	0.00 kg	0.043 kg	2
3	70 kg	70.00 kg	0.00 kg	0.050 kg	2
4	100 kg	100.00 kg	0.00 kg	0.059 kg	2
5	150 kg	149.95 kg	-0.05 kg	0.075 kg	2
6	0 kg	0.00 kg	0.00 kg	0.029 kg	2

The uncertainty stated is the expanded uncertainty at calibration obtained by multiplying the standard combined uncertainty by the coverage factor k - which can be larger than 2 according to ASTM E898 and EURAMET cg-18. The value of the measurand lies within the assigned range of values with a probability of approximately 95%.

The user is responsible for maintaining environmental conditions and the settings of the weighing instrument when it was calibrated.

Test Equipment

Tous les poids utilisés pour le contrôle métrologique sont retraçables aux étalons Nationaux et Internationaux. Les poids ont été calibrés et certifiés par un laboratoire de calibration accrédité.

End of Accredited Section

The information below and any attachments to this calibration certificate are not part of the accredited calibration.

Incertitude de Mesure du dispositif de pesage en opération

Stated is the expanded uncertainty with k=2 in use. The formula shall be used for the estimation of the uncertainty under consideration of the errors of indication. The value R represents the net load indication in the unit of measure of the device.

Coefficient de température pour l'évaluation de l'incertitude de mesure en opération: 10.0 · 10⁻⁶ / K

Plage d'opération sur le site pour l'évaluation de l'incertitude de mesure en opération: 22 K

Linéarisation de l'Équation d'Incertitude

	Plage		Tel que Trouvé	Tel que Laissé
	d	Max		
1	0.05 kg	150 kg	$U_1 = 41 \text{ g} + 0.971 \text{ g/kg} \cdot R$	N/A

To optimize the stability of the linearization, besides of the zero load only increasing measurement points with a test load of 5% of the measurement range or larger are taken for the calculation of the linear equation.

Absolute and Relative Measurement Uncertainty in Use for Various Net Indications (Examples)

Indication Net	Tel que Trouvé		Tel que Laissé

Non Compliant:		

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution $k=2$.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

CERTIFICATE #	CE-EM-127 2023-05-11
----------------------	-----------------------------

CALIBRATION DATE/ISSUANCE OF CERTIFICATE	
Calibration Date:	2023-05-11
Next Calibration:	2024-05-11
Certificate Date:	2023-05-11

CALIBRATION CONFORMITY		
	Before	After
Compliant:	X	X
Non Compliant:		

- Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- Reported uncertainties represent a 95 % of confidence level assuming a normal distribution $k=2$.
- The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- The results presented in this certificate relate only to objects subject to calibration.
- It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

BALANCES

The following balances are used for calibration purposes :

> 5 kg to 25 kg :	Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g
> 1 kg to 5 kg :	Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g
> 300 g to 2 kg :	Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg
> 100 g to 200 g :	Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg

We are also using these balances in our automated procedure :

> 200 g to 1 kg :	Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Calibration of

Positive displacement flow meter American Meter Company DTM-200A S/N : 99A274209

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

CONDITION SUMMARY OF THE DEVICE UNDER TEST

Initial conditions	In good condition
Work done	Initial readings = Final readings, no adjustment. Calibration of the instrument
Results	Final readings in tolerance
Remarks	Calibration frequency every 6 months Tolerance modified per end user request

Final results

See the appendix for the guideline of decision rule

JAN. 9 2023

$T_e = 0.9985$

Appendix for the decision rule

Method #1 Binary Statement for Simple Acceptance Rule

A binary decision rule exists when the result is limited to two choices: pass or fail. Considering that the acceptance limit equals the tolerance limit, no guard band is applied. In other words: $w = 0$ and $AL = TL$. This method does not take uncertainty into account, and the risk that the specified value is in tolerance or out of tolerance could be up to 50%.

Statements of conformity are reported as:

Graphical representation of a Binary Statement – Simple Acceptance

Case 1 – Below tolerance limit

Status: In tolerance

- The result is inside the acceptance interval. Uncertainty is not taken into account. Green.

Case 2 – Below tolerance limit, uncertainty overlapping tolerance limit

Status: In tolerance

- The result is inside the acceptance interval and the risk that the result is outside of the tolerance interval could be up to 50%. Uncertainty is not taken into account. Green.

Case 3 – Greater than tolerance limit, uncertainty overlapping tolerance limit

Status: Out of tolerance

- The result is inside the rejection interval and the risk that the result is inside the tolerance interval could be up to 50%. Uncertainty is not taken into account. Red.

Case 4 – Greater than tolerance limit

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is not taken into account. Red.

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

Calibration of
Shinigawa DCDa-2c S/N : 23544

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NC SL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

See the appendix for the guideline of decision rule

Appendix for the decision rule

Method #3 Non-binary Statement with Guard Band, uncertainty directly taken into account

This decision rule uses a guard band to define the acceptance and rejection interval. The acceptance limit is defined by the following mathematical formula $AL = TL - w$ and the rejection limit $RL = TL + w$, where $w = rU$. The multiple r that is multiplied by the expanded measurement uncertainty U can be defined following ILAC G8: 2019 table 1 section 5.2. The expanded measurement uncertainty U has a 95% coverage probability ($k = 2$). Non-binary statement with guard band exists when the result is limited to four choices: pass, conditional pass, conditional fail, and fail.

Statements of conformity are reported as:

Graphical representation of a Non-Binary Statement with a Guard Band

Case 1 – Below acceptance limit AL

Status: In tolerance

- The result is inside the acceptance interval. However, assuming a normal distribution, the risk that the result is outside the tolerance limit could be up to 2.5%. Uncertainty is directly taken into account. Green.

Case 2 – Below tolerance limit TL, greater than acceptance limit AL

Status: In tolerance-Conditional

- The result is outside the acceptance interval but below tolerance limit. However, the observed value is inside the guard band $w = TL - AL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. Yellow.

Case 3 – Greater than tolerance limit, below rejection limit RL

Status: Out of tolerance-Conditional

- The result is greater than tolerance limit but outside the rejection interval. However, the observed value is inside the guard band $w = RL - TL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. Yellow.

Case 4 – Greater than rejection limit RL

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is directly taken into account. Red.

BALANCES

The following balances are used for calibration purposes :

> 5 kg to 25 kg :	Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g
> 1 kg to 5 kg	Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g
> 300 g to 2 kg :	Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg
> 100 g to 200 g :	Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg

We are also using these balances in our automated procedure :

> 200 g to 1 kg :	Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Calibration of
Positive displacement flow meter Shinigawa DCSDa-2C S/N : S8020

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

CONDITION SUMMARY OF THE DEVICE UNDER TEST

Initial conditions	In good condition
Work done	Calibration of the instrument Initial readings = Final readings, no adjustment
Results	Final readings in tolerance
Remarks	Calibration frequency every 6 months

Appendix for the decision rule

Method #3 Non-binary Statement with Guard Band, uncertainty directly taken into account

This decision rule uses a guard band to define the acceptance and rejection interval. The acceptance limit is defined by the following mathematical formula $AL = TL - w$ and the rejection limit $RL = TL + w$, where $w = rU$. The multiple r that is multiplied by the expanded measurement uncertainty U can be defined following ILAC G8: 2019 table 1 section 5.2. The expanded measurement uncertainty U has a 95% coverage probability ($k = 2$). Non-binary statement with guard band exists when the result is limited to four choices: pass, conditional pass, conditional fail, and fail.

Statements of conformity are reported as:

Graphical representation of a Non-Binary Statement with a Guard Band

Case 1 – Below acceptance limit AL

Status: In tolerance

- The result is inside the acceptance interval. However, assuming a normal distribution, the risk that the result is outside the tolerance limit could be up to 2.5%. Uncertainty is directly taken into account. Green.

Case 2 – Below tolerance limit TL, greater than acceptance limit AL

Status: In tolerance-Conditional

- The result is outside the acceptance interval but below tolerance limit. However, the observed value is inside the guard band $w = TL - AL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. Yellow.

Case 3 – Greater than tolerance limit, below rejection limit RL

Status: Out of tolerance-Conditional

- The result is greater than tolerance limit but outside the rejection interval. However, the observed value is inside the guard band $w = TL - RL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. Yellow.

Case 4 – Greater than rejection limit RL

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is directly taken into account. Red.

Calibrated Device Information

Manufacturer: Testo Description: Anemometer Method Used: Pitot Tube
Model #: 405i Rated Accuracy: See Attachments Accuracy Specified By: Testo
Instrument ID: EM 332 Range: 0 - 5900 fpm Condition: Functional
Serial #: 46100640 Calibration Date: 02/09/2023 Calibration Due: 02/09/2024
Comments: Limited calibration range: 0-2000 fpm

The calibrations within the certificate/report are traceable through NIST or another National Metrology Institute to the International System of Units (SI). The reported calibration uncertainty has a confidence level of 95% (k=2). A calibration uncertainty ratio of 4:1 was maintained unless required uncertainty is supported by analysis. Graftel Quality Assurance System complies with applicable requirements of ISO/IEC-17025-2017, ANSI/NCSL Z540-1-1994 and ISO 9001. All results contained within this certificate relate only to item(s) calibrated. This certificate shall not be reproduced except in full and with the written consent of Graftel. Acceptance Criteria per Simple Acceptance Rule: Measurement Uncertainty is not applied to the measured value when in/out of tolerance statement is made.

STATEMENT OF UNCERTAINTY: The reported expanded uncertainty of measurement is stated as the standard measurement uncertainty multiplied by the coverage factor $K = 2$, which for a normal distribution corresponds to a coverage probability of approximately 95 percent. Alpha Controls & Instrumentation Inc. certifies this instrument was calibrated on the date shown using standards traceable to NIST/NRC or accepted intrinsic standards and in compliance with ISO/IEC-17025:2017 and ANSI/NCSL Z540-1.

Any statement of compliance is made without taking measurement uncertainty into account and is based on UUT performance against required tolerance only. The customer must ensure equipment calibrated meets the intended use.

Tolerance is based on manufacturer specification if not stated otherwise. Calibration results relate to items calibrated only.

This certificate shall not be reproduced except in full without written approval of Alpha Controls and Instrumentation Inc.

Functional tests are not covered by our scope of accreditation.

BALANCES

The following balances are used for calibration purposes :

> 5 kg to 25 kg :	Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g
> 1 kg to 5 kg :	Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g
> 300 g to 2 kg :	Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg
> 100 g to 200 g :	Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg

We are also using these balances in our automated procedure :

> 200 g to 1 kg :	Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg
> 5 g to 100 g :	Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg
1 mg to 5 g :	Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

This Air Liquide Canada mixture is traceable to NIST

METHOD OF ANALYSIS:

Method of analysis is based on principles of gas chromatography and as documented in Air Liquide Canada operating procedure, where applicable, FID, TCD, PDHID, FT-IR, FPD, NO/NOx and SO2 chemiluminescence, hygrometer, and electrochemical cells and paramagnetic cell. Detectors were used in conjunction with packed or capillary columns calibrated flow meters and dilution calibrated system.

CALIBRATION CERTIFICATE

CERTIFICATE #	CE-EM-340 2023-05-11
----------------------	-----------------------------

CALIBRATION DATE/ISSUANCE OF CERTIFICATE	
Calibration Date:	2023-05-11
Next Calibration:	2024-05-11
Certificate Date:	2023-05-11

	CALIBRATION CONFORMITY	
	Before	After
Compliant:	X	X
Non Compliant:		

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

1 SAFETY

SUPREME FIREPLACES INC. congratulates you on purchasing a LUMIS wood burning fireplace insert. This insert complies with the ULC S628 and UL 1482 standards. In addition, this wood insert is certified to comply with Phase II particulate emission standards from the US Environmental Protection Agency.

SAFETY NOTICE: Carefully read this manual before installation and operation of this insert. If not properly installed, a house fire may result. To reduce the risk of a fire, follow the installation instructions. Failure to follow instructions presented in this manual can lead to property damage, bodily injury or even death. Alterations or modifications made on the unit or the installation is strictly forbidden as it may predispose the user to hazardous risks. Contact your local building or fire officials for restrictions and installation inspection requirements in your area and the need to obtain a permit.

WARNING: This unit is hot during operation; keep children, pets, flammable liquids, or combustible materials at a safe distance. Ensure that all clearances to combustible materials are respected. Contact with the unit during operation may cause severe harm. Install a safety screen to keep children and pets away.

CAUTION:

- Do not connect this unit to a chimney flue serving another appliance.
- Do not connect to any air distribution duct or system.
- Never use chemicals to ignite the fire.
- Never burn waste or flammable fluids (such as gasoline, naphtha, or engine oil).
- Only burn dry natural cordwood.
- Never leave the unit unattended with the door open or unlatched.
- Only refuel this unit when the wood is reduced to embers.
- Always keep the door closed during operation.
- Do not operate this unit with a fireplace grate.
- Do not install an unvented gas log set into the firebox.
- Do not install this unit in a mobile home.
- Do not clean or service the unit while it is hot.
- Allow proper air flow by keeping the louvers/openings clear of any obtrusions.

Note: Failure to respect the above cautions may cause damages to the unit, damages to personal property, bodily harm and will void the warranty. "This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual."

We recommend that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

This product can expose you to chemicals including carbon monoxide, which is known to the State of California to cause cancer, birth defects or other reproductive harm. For more information go to www.P65warnings.ca.gov/

2 COMPONENTS

2.3 Specifications

Model:	Lumis 22	Lumis 32
Appliance Type:	Adjustable Burn Rate Wood Heater – Non-Catalytic	Adjustable Burn Rate Wood Heater – Non-Catalytic
Fuel Type:	Dry Cordwood	Dry Cordwood
Maximum Log Length:	18 in (45.7 cm)	22 in (55.9 cm)
Burn Time¹:	6 to 8 hrs	6 to 12 hrs
Firebox Volume:	2.20 ft ³ (0.062 m ³) ²	3.2 ft ³ (0.091 m ³)
Heating Area:	Up to 1,500 ft ² (139 m ²)	Up to 2,000 ft ² (185 m ²)
Average Particulate Emissions Rate³:	1.3 gr/hr	1.59 gr/hr
Average CO Emissions Rate⁴:	2.2 gr/min	119.4 gr/hr
EPA Protocol:	Method 28R	Method ALT-125
Efficiency:	HHV ⁵ : 67% LHV ⁶ :	HHV: 66.07% LHV: 71.09%
Heat Output:	10,076 to 19,559 BTU/hr (2,953 to 5,732 W)	19,029 to 49,358 BTU/hr (5,576 to 14,465 W)
Optimum Efficiency:	75%	75%
Optimum Heat Output:	75,000 BTU (22.0 kWh)	100,000 BTU (29.3 kWh)
Efficiency Protocol:	CSA B415.1-10	CSA B415.1-10

WARRANTY REGISTRATION

Please register your SUPREME product online at <http://www.supremem.com/registration.php> to ensure full warranty coverage. Proof of purchase is required for all warranty claims.

¹ Depending on combustion air control setting (see Section 4.3 for further details).

² Usable volume according to ASTM E2780-10 standards calculated at 1.91 ft³ - figure used in EPA Method 28R testing.

³ Officially tested and certified by an independent laboratory.

⁴ Low/medium burn rate settings produce a lower emission rate.

⁵ Higher Heating Value.

⁶ Lower Heating Value.

2.4 Combustion Air Control

The Combustion Air Control is a patented mechanism (Patent No: US 7,325,541 B2) that regulates the air flow into the firebox based on the temperature of the unit. It is located on the top of the firebox, at the front center of the unit. The combustion air control of the LUMIS has two components: the Activator and the Burn Rate Selector. The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow a primary source of air to enter the firebox. The Activator will retract automatically with heat. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set.

Figure 2-1: Primary Air Control

WARNING: Never manipulate the Combustion Air Control with bare hands as it gets hot when the LUMIS is in operation. Use the Cold Hand Key to adjust the Combustion Air Control.

2.5 Baffle Secondary Burn Technology

The baffle system of the LUMIS insert is located within the upper portion of the firebox and is fastened by 6 bolts (3/8 Hex). SUPREME baffle systems are constructed out a specific grade of stainless steel capable of withstanding high-temperature conditions. The secondary combustion air is drawn into the baffle system, pre-heated, and distributed below the lower plate, allowing for a cluster of small flames flowing downwards. This effect is more visible in the minimum burn rates. For optimal performance, it is recommended to clean any creosote build-up on the lower plate of the baffle system.

Figure 2-2: Baffle Secondary Burn Technology

2.6 Cold Hand Key

The Cold Hand Key is an accessory that comes standard with the LUMIS insert. The Cold Hand Key is a tool used to manipulate the Combustion Air Control Levers when it is hot.

Figure 2-3: Cold Hand Key

2.7 Chimney Sweeping Cap

The chimney sweeping cap found at the baffle of the LUMIS allows easy access for chimney sweeping without having to remove any components of the firebox.

WARNING: The chimney sweeping cap must always block access to the chimney during combustion. A chimney sweeping cap that is not blocking the baffle hole during combustion is a safety hazard, will overheat the fireplace and void the warranty.

Figure 2-4: Chimney Sweeping Cap

2.8 Door

The LUMIS wood burning insert comes with a Pyroceramic glass panel door. Pyroceramic is the highest grade available for fireplaces and stoves and can withstand temperatures up to 704°C / 1300°F. To remove the door, open the door, lift it and pull it towards the bottom until the rod exits from the hinge holes.

NOTE: The door of the LUMIS must remain closed at all times during operation.

2.9 Blowers

The LUMIS wood burning fireplace insert is equipped with two AC centrifugal compact fans on either side of the surround (**electrical rating: 115V, 60Hz, and 19W**).

CAUTION: Make certain that the fireplace is not in operation and the blowers are unplugged before accessing the electrical wiring.

Plug the power cord into an 115V **grounded** outlet for protection against a power surge. The blowers will turn on and turn off automatically during the operation of the unit. As the temperature of the fireplace insert increases and the heat activated sensor reaches 35°C / 95°F, the fans will turn on. Note that the average time it takes for the fans to activate is between 30 to 45 minutes after starting a fire. The fans will turn off once the fireplace has cooled down and the heat activated sensor reaches 85°F. Note that the response time of the blowers can be adjusted by sliding the thermodisk mounting bracket further (longer delay) or closer (shorter delay) from the firebox. The speed of the fans can be adjusted with the variable speed control installed on the side of the surround. It is safe to operate the LUMIS in the event of a power failure (fans not powered).

2.10 Optional Fresh Air Adaptor

The Optional Fresh Air Kit allows for exterior air (outdoors) to be drawn into the fireplace during operation of the unit. Note that a 4 inches duct is required for the installation (item ordered separately). Refer to Section 4.7 for installation instructions. Contact your local building official regarding mandatory fresh air kit installations within your area.

CAUTION: Only a fresh air kit provided by SUPREME FIREPLACES INC. can be installed onto the fireplace. Substituting the fresh air kit may result in overheating and will void the warranty.

2.11 Cast Iron Interior

The LUMIS stainless steel firebox is lined with cast iron panels for an extra layer of durability and strength. Designed to provide long-lasting heat and thermal protection, these industry-first, decoratively stamped panels also provide the added benefit of the timeless beauty of cast iron. Forged in fire, tempered with time, the LUMIS offers a lifetime of warmth.

2.12 Surround

A surround comes standard with the LUMIS. Please refer to the figures below for dimensions.

Figure 2-5: 22LMFA-01 - Lumis 22 Surround

Figure 2-6: 32LMFA-01 - Lumis 32 Surround

2.13 Faceplate

A 12 gauge thick faceplate option is offered to cover the opening between the existing masonry fireplace and the surround of the unit. It is permitted to cut the surround for installation or aesthetic purposes. Please refer below to the surround options of the LUMIS insert.

Figure 2-7: Lumis 22 Faceplates

Figure 2-8: Lumis 32 Faceplates

2.14 Circulating Chamber

The circulating chamber is a standard component of the LUMIS insert. It is designed to prevent heat escaping to the existing chimney and allows for an optimal flow and heat transfer. The top removable bracket can be taken off during installation to allow for better accessibility to the liner adaptor. Note that the top removable bracket needs to be installed and fastened (2 wing nuts) before operating the LUMIS.

2.15 Adjustable Legs

The LUMIS insert comes with three adjustable legs in the bottom of its firebox to allow adjustment of the height for leveling purposes.

Figure 2-9: Circulating Chamber

2.16 Liner Adaptor

The Liner Adaptor is a component that comes with the LUMIS and is required to connect a 6" stainless steel liner to the unit.

2.17 Metal Tag

The Metal Tag specifies that alterations have been made to the masonry fireplace to accommodate the LUMIS insert. The metal sheet having the Metal Tag is to be installed with two screws at the hearth of the masonry fireplace. Note that the Metal Tag must be installed with the writing face upwards so that it is visible if the insert fireplace is removed.

The Metal Tag reads as follows:

This fireplace has been altered to accommodate a fireplace insert and should be inspected by a qualified person prior to re-use as a conventional fireplace.

Ce foyer a été modifié afin d'y insérer un foyer encastrable et doit être inspecté par une personne qualifiée avant sa réutilisation comme foyer conventionnel.

Figure 2-10: Liner Adaptor

2.18 Serial Number

The certification label contains important information regarding the installation and operation of the LUMIS fireplace insert. In addition, the serial number of the unit is permanently embossed onto the top right corner of the label. The certification label is located at the bottom right corner of the door and is accessible by opening the door and pulling the plate.

Figure 2-11: Serial Number Location

3 INSTALLATION INSTRUCTIONS

The masonry fireplace is to be constructed in accordance to N.F.P.A. 211 (Latest Edition), Standards of Chimney, Fireplaces, Vents and Solid-Fuel-Burning Appliances and Equipment. The LUMIS fireplace insert is intended only for masonry fireplaces installed with a continuous chimney liner of 6 inches diameter extending from the fireplace insert to the top of the chimney. This insert must be connected to a code-approved masonry chimney or listed factory-built fireplace chimney with a direct flue connector into the first chimney liner section. The chimney size should not be less than or more than three times greater than the cross-sectional area of the flue collar. The chimney liner must conform to the Class 3 requirements of CAN/ULC-S635, Standard for Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents or CAN/ULC-S640, Standard for Lining Systems for New Masonry Chimneys. Contact a local building inspector for information on additional requirements and/or codes in your area.

CAUTION: Read these instructions carefully before starting the installation. Failure to follow these instructions may result in property damage, bodily harm and even death. Modifications of the instructions presented in this section without written authorization from SUPREME FIREPLACES INC. will void the warranty.

Be sure that the fireplace and chimney are clean and in good condition. Seal all cracks using stove cement. Seal permanently any openings between the masonry of the fireplace and the facing masonry. Remove or keep permanently open the existing damper of the fireplace. If there is an accumulation of creosote in the chimney or flue, it must be thoroughly cleaned. When installing, operating and maintaining a solid fuel heater, respect basic standards for fire safety.

Table 3-1: Minimum Opening Dimensions

Model:	LUMIS 22	LUMIS 32
Width (Front) - WF	29.00" (737 mm)	34.00" (864 mm)
Width (Back) - WB	19.00" (483 mm)	22.00" (559 mm)
Height (Front) - HF	19.50" (495 mm)	23.75" (603 mm)
Height (Back) - HB	18.00" (457 mm)	23.75" (603 mm)
Depth ⁷ - D	16.75" (426 mm)	19.00" (483 mm)

WARNING: Do not remove bricks or mortar from the masonry fireplace.

Refer to Table 3-1, Figure 3-1 and Figure 3-2 for minimum opening dimensions of the masonry fireplace.

NOTE: The non-combustible hearth must extend a minimum of 16" for USA (406 mm) and 18" (457 mm) for Canada from the door and 8" (203 mm) on each side of the masonry fireplace opening and must be a minimum of 50" (1,270 mm) long.

NOTE: It is strongly recommended to install a carbon monoxide (CO) and smoke detector near the location of the unit.

⁷ Overall depth of unit can be adjusted with the Surround Extension Kit (see Section 4.8).

Figure 3-1: Minimum Opening Dimensions – Front View

Figure 3-2: Minimum Opening Dimensions – Side View

3.1 Preparing the Firebox for Installation

- Unfasten and remove the front shipping cover of the unit (Figure 3-3).
- Unfasten the back of the unit from the pallet (Figure 3-4).
- Remove the door by opening it, lifting it, and pulling it towards the bottom until the rod exits from the hinge holes.
- From within the firebox, push the chimney sweeping cap upwards and place it to the side.

Figure 3-3: Shipping Front Cover Removal

3.2 Liner Installation

- Determine the required length of liner by measuring the bottom of the hearth to the top of the existing chimney. **NOTE:** Additional length of the liner is needed for proper installation of the flashing and chimney cap. **WARNING: The minimum and maximum height of the liner is 15' and 35' respectively.**
- Slide the stainless steel liner down the existing chimney.
- Lower the liner 24 inches from the hearth.
- Fill the space between the liner and the baffle of the existing chimney with Stone Wool insulation to prevent heat from escaping.

3.3 Liner Adaptor Installation

Insert the 6" diameter liner adaptor at the end of the liner. The liner must be flush with the inferior rim of the adaptor.

- Tighten the clamp to secure the liner with the liner adaptor.
- Secure the liner adaptor in place with stainless steel self-piercing sheet metal screw.

Figure 3-4: LUMIS Removal from Pallet

3.4 Firebox Installation

- Slide the LUMIS fireplace insert into the masonry fireplace.
- Align the liner adaptor with the top opening of the circulating chamber. Note that the top/front portion of the circulating chamber can slide off to allow for better access to the liner adaptor - loosen wing nuts on front bracket (Figure 3-6).
- Insert your hand in the chimney sweeping cap opening and pull the liner down by the handle of the adaptor.
- Use your thumb to bend the 4 tabs of the liner adaptor outward to secure the liner in place.
- Reposition the chimney sweeping cap back in the chimney sweeping cap hole of the baffle.

Figure 3-5: Stainless Steel Liner Connection

Figure 3-6: Circulating Chamber Top Removable Bracket

WARNING: The chimney sweeping cap must always block access to the chimney during combustion. A chimney sweeping cap that is not blocking the baffle hole during combustion is a safety hazard, will overheat the fireplace and void the warranty.

3.5 Surround Installation

- Install the surround and secure it with four screws, two on either side.
- Install the door by inserting the upper rod into the upper hole and then lowering the lower rod into the lower hole.
- Inspect the installation. If the surround is not flush against the wall, level the firebox by using the adjustable legs.

Figure 3-7: LUMIS Installation

3.6 Clearances to Combustibles

Refer to Figure 3-7, Figure 3-8, Table 3-2 and Table 3-3 for clearances to combustibles of the LUMIS insert.

Figure 3-8: Clearances to Combustibles (a) Front View (b) Side View

Table 3-2: Clearances to Combustibles

Note that the non-combustible hearth must extend a minimum of 16" for USA (406 mm) and 18" (457 mm) for Canada from the front of the door and 8" (203mm) on each side of the masonry fireplace opening. **WARNING: Keep a minimum distance of 5' (152 cm) from the unit to any combustible material (such as firewood, furniture, and drapes) as a fire hazard precaution.**

The depth of the mantle is measured from the face of the fireplace door. When the non-combustible wall is recessed, the depth of the mantle can be increased by the amount of the recess. **Note that a mantle cannot be installed below the minimum clearance of 13" from the bottom of the mantle to the top edge of the door.**

Sidewall from outer edge of fuel door	15.5" (394 mm)
Side trim (max 4" depth) from outer edge of fuel door	7" (178 mm)
Protruding mantel (max 8" depth) from top edge of fuel door	13" (330 mm)
Height (H) from the base of the unit to the floor with a non-compliant N.F.P.A. 211 hearth extension having a negligible R-value	13" (330 mm)
Height (H) from the base of the unit to the floor with a non-compliant N.F.P.A. 211 hearth extension having a R-value of 2.957	USA: 3.5" (89 mm) CAN: 1.25" (32 mm)

Table 3-3: Examples of Depth of Mantle with Respect to Distance from Top Edge of Door⁸

Maximum mantle depth	Distance from the top edge of the door of the LUMIS to the bottom of the mantle
8" (203 mm)	13" (330 mm)
10" (254 mm)	15" (381mm)
12" (305 mm)	17" (432 mm)

⁸ Values determined using a 45° rule – 1 inch of height added results in 1 inch additional allowable depth

3.6.1 Calculating R-Value

The below information demonstrates how to calculate the R-Value for a non-compliant N.F.P.A. 211 hearth extension.

The R-Value is a measurement of a material's insulating properties with respect to a referenced thickness (see Table 3-4). The total R-Value of the hearth extension constructed out of different materials can be calculated by summing the R-Value of each material with respect to the thickness (see equation below).

Table 3-4: Thermal Properties of Materials⁹

Material	Thermal Resistance [R-Value] per Inch	Thermal Conductivity [k-Value] per Inch
Cement Board (Durock Next Gen)	0.780	1.282
Brick	0.200	5.000
Limestone	0.153	6.536
Slate	0.100	10.000
Concrete	0.095	10.526
Marble	0.090	11.111
Granite	0.083	12.048
Ceramic Tile	0.080	12.500

$$R_{\text{Total}} = (R_1 \times T_1) + (R_2 \times T_2) + (R_3 \times T_3) + \dots$$

Note the k-Value per inch can be converted to an R-Value per inch using the following formula:

$$R = \frac{1}{k}$$

Example:

A hearth extension is constructed out of 4" of concrete with 14.5" brick. The total R-Value is:

$$R_{\text{Total}} = (R_{\text{con}} \times T_{\text{con}}) + (R_{\text{brick}} \times T_{\text{brick}}) = (0.095 \times 4") + (0.200 \times 14.5") = 3.280$$

⁹ Values based on manufacturers technical specifications

4 OPERATION INSTRUCTIONS

WARNING: READ THE OWNER'S MANUAL CAREFULLY BEFORE USING YOUR FIREPLACE INSERT. The LUMIS is not intended to serve as a primary source of heat; the home where the LUMIS fireplace insert will be installed must have a primary source of heat. SUPREME is not responsible for heating costs related to other sources of heat.

4.1 Fuel

The LUMIS is designed to burn natural wood only. Higher efficiencies and lower emissions generally result when burning air dried seasoned hardwoods (moisture content below 20%), as compared to softwoods or to green or freshly cut hardwoods. The following are a few signs indicating that firewood is sufficiently dry for use: (a) cracks on the ends and surface of the logs, (b) lighter in weight, and (c) color (yellow/grey). It is recommended to use a moisture meter with pin sensors for determining accurately the moisture content of firewood (read manufacturer's instruction manual before operating). The optimum log length is between 16" to 18" for the Lumis 22 and 18" to 22", preferably split in halves or quarters and left to dry under a cover or away from external elements for a minimum of one year prior to use. Use good quality dry cordwood only. **DO NOT** burn garbage, lawn clipping, yard waste, materials containing rubber (including tires), materials containing plastic, waste petroleum products, paints, paint thinners, asphalt products, materials containing asbestos, construction debris, demolition debris, railroad ties, pressure-treated wood, manure, animal remains, coal, salt water driftwood or other previously salt water saturated materials, unseasoned wood, paper products, cardboard, plywood, particle boards, or other foreign materials in this product. The prohibition against burning these materials does not prohibit the use of fire starters made from paper, cardboard, saw dust, wax and similar substances for the purpose of starting a fire in an affected wood heater. Burning these materials may result in release of toxic fumes or render the heater ineffective and cause smoke. Do not over fire the LUMIS fireplace insert. Over firing will damage the fireplace, is hazardous and will void the warranty. **NOTE:** Gas logs cannot be installed in the LUMIS fireplace insert.

WARNING: Never use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in this unit. Keep all such liquids well away from the fireplace insert while it is in use.

Ecological or compressed logs containing chemical additives are not tested and approved to be used with the LUMIS. Using them will overheat and damage the fireplace and void the warranty. Ecological or compressed logs that are 100% wood and contain no other additives can be safely used in the LUMIS. Never use more than three of these logs at a time. Using more is not only dangerous but will damage the fireplace and void the warranty. Follow the ecological log manufacturer's safety guidelines and recommendations and be sure that they are intended for use in fireplaces. Reload only once the previous load of wood has been consumed and only embers remain.

WARNING: Do not keep the door open while the fireplace is in operation.

4.2 First Fires

For the first 3 fires, burn a maximum of 3 logs at the medium to low burn rate (refer to Section 4.3) to allow for proper conditioning of the unit. Due to oil residues and the curing of the paint of the fireplace, it is normal to smell an odor for the first fires of the LUMIS. Open a window or a door near the fireplace insert to ventilate the house during the first fires. Oil residues may cause light smoking.

4.3 Operating the Combustion Air Control

The burn rate and the heat output are related to the amount of air entering into the firebox. The combustion air control of the LUMIS has two components: the Activator and the Burn Rate Selector. When starting the fire or

when adding a new charge of wood, the fireplace needs additional air in order to establish a good fire. When the wood starts to burn properly, the amount of air can be reduced depending on the heating requirements.

The left combustion control lever is the Activator. When starting a fire or adding a new load of wood, the Activator must be pushed in to allow maximum air to enter the firebox. The right combustion control lever is the Burn Rate Selector. The Burn Rate Selector can slide sideways to achieve different burn rates. When the Burn Rate Selector is positioned to the left, a maximum burn rate is achieved and when it is positioned to the right, a minimum burn rate is set. Keeping the Burn Rate Selector to the right will burn the wood slower. Keeping the Burn Rate Selector to the left will provide a stronger fire and keep the glass of the fireplace cleaner for longer. Adjust the burn rate according to your heating requirements and the quality of your wood. The combustion air control will automatically and gradually close the primary air source to the selected burn rate setting (right lever) with the presence of heat to maximize the burn time.

NOTE: The Burn Rate Selector can remain at the same setting at all times if the burn rate is satisfactory. However, the Activator must be pushed in when starting a fire or when adding a new load of wood.

WARNING: The combustion air openings should never be obstructed.

WARNING: Never manipulate the Combustion Air Control with bare hands as it gets hot when the LUMIS is in operation. Use the Cold Hand Key to adjust the Combustion Air Control.

WARNING: This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.

4.4 Starting a Fire

The LUMIS has patented technologies and innovative features that make starting a fire quick and easy. Before starting a fire, assure that all the safety precautions mentioned in the owner's manual are being respected. Prior to starting a fire, check whether the unit is drafting correctly – please refer to Section 5.1 if a light breeze is felt from within the firebox. The following instructions describe starting a fire in the LUMIS fireplace insert using a “top-down” approach, which results in a cleaner, more efficient, and longer burn:

- a) Place small to medium size logs on the hearth of the firebox in the north-south direction. The logs should sit directly on the hearth with adequate space between them to allow for proper air flow. Do not use a fireplace grate.
- b) Place kindling wood or small logs on top of the logs from step a). Keep a good distance from the top layer of the kindling/logs and the baffle system (approximately 3 inches).
- c) Push the left combustion control lever (the Activator) inwards.
- d) Slide the right combustion control lever (the Burn Rate Selector) to the maximum burn rate position (towards the left)
- e) To achieve a “top-down” combustion, ignite the top layer of kindling/logs. A firestarter can be used to facilitate ignition.
- f) Once the top layer has properly ignited, close the door. Do not leave the door open for more than 2 minutes.

CAUTION: The wood should be placed away from the door to avoid damage to the glass.

WARNING: Do not use fire accelerants to rekindle the fire if the first attempt to start the fire failed. Do not open the door. Simply reactivate the Activator by pushing it inwards.

NOTE: Sufficient air exchange is necessary for the fireplace to operate properly. Air is required in order to maintain the combustion of the fireplace. If the house is airtight,

Figure 4-1: Non-recommended Wood Configuration

Figure 4-2: Recommended Wood Configuration

the fireplace may not function properly. If the fireplace is deprived of air, it will be necessary to provide a source of fresh air into the dwelling. This may be done by using an air exchanger unit or simply by opening a window or a door near the fireplace partially for a few minutes. Make sure that other equipment such as the kitchen exhaust fans or oil central heating systems does not affect the fireplace functionality. Large return ducts of central heating systems located in the same room as the fireplace may affect the proper functioning of the unit and may cause smoking.

4.5 Adding a Load of Wood

WARNING: Open the door to reload only when the wood has been reduced to embers, otherwise there is a risk of smoke infiltration into the house.

When the wood has been reduced to embers and there's no visible flame, you may add a new load.

- a) Turn the fans off.
- b) Crack the LUMIS door open and wait a few moments before opening the door completely.
- c) Use your fireplace tools to gather the remaining embers at the center of the firebox.
- d) Position the Burn Rate Selector to the desired setting and activate the Activator by pushing it in.
- e) Once the embers begin to glow red, add the new load of wood in the firebox.
 - a. Place the first row of wood (2 pieces) in the north-south direction on the center of the hearth, with an adequate space between the logs.
 - b. Place the second row of wood (2 pieces), in the east-west direction with an adequate space between the logs.
 - c. Place the fifth log on top of the first and second row, in a diagonal direction
- f) Keep the door of the LUMIS slightly unlatched until you see a flame in the firebox. Never leave the LUMIS door unlatched without constant supervision.
- g) Completely latch the LUMIS door.
- h) Fans can be turned on once proper ignition has been achieved of the newly added wood.

Assure that a flame is maintained. Avoid wood smoldering on top of embers as this will result in a dirty glass, excessive emissions, chimney creosote buildup and poor heat output. If wood is smoldering, ensure the Activator has been activated and unlatch the door slightly with supervision until a flame has been maintained.

WARNINGS: Over firing the unit may result in overheating and can damage the fireplace and/or result in fire hazards. The maximum firewood load must not exceed 5 large sized logs. This fireplace has been designed to burn with the door closed. When the fireplace is being used, the door should remain closed at all times. Failing to do so is a safety hazard, will damage the fireplace and void the warranty.

4.6 Blower Kit

A blower kit is included in the LUMIS fireplace insert, which comprises of two compact blowers (120V, 60Hz, 19W) mounted at the bottom on either side of the firebox and a heat sensory thermodisk. The kit includes a variable speed control to adjust the speed of the fans. Do not install a substitute kit as this may result in overheating and risk of fire.

CAUTION: Do not route the power cord under or in front of the unit, on hot surfaces, and on sharp edges.

NOTE: Disconnect the power supply when accessing any electrical components in the LUMIS insert fireplace.

Figure 4-3: Blower Kit Configuration

Once the power cord has been plugged to the nearest 115V outlet, the fans will turn on and turn off automatically. When the insert gets hot and the thermodisk reaches 95°F, the fans will turn on. The average time it takes for the fans to activate is 30 to 45 minutes after starting a fire as explained in this manual (Section 4.4 [Starting a Fire](#)). The fans will turn off once the insert has cooled down and the thermodisk reaches 85°F. Note that the response time of the blowers can be adjusted by loosening the screws and sliding the thermodisk mounting bracket further (longer delay) or closer (shorter delay) from the firebox (see Figure 4-4). The speed of the fans can be adjusted with the variable speed control (clockwise to reduce speed and counter-clockwise to increase). To manually shut-off the blower kit, turn the counter-clockwise until the knob “clicks”.

Figure 4-4: Heat Sensor (Thermodisk) Adjustment

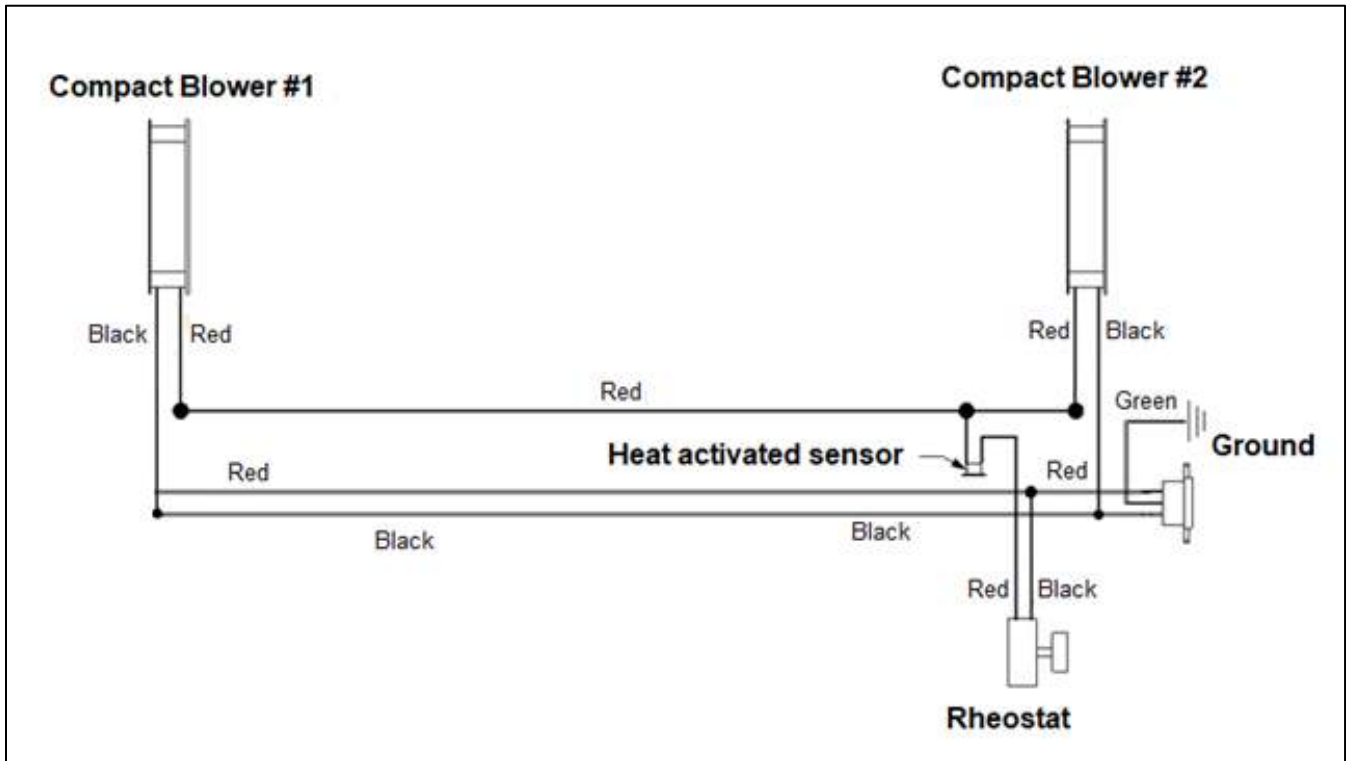

Figure 4-5: LUMIS Blower Kit - Electrical Diagram

4.7 Fresh Air Kit (Optional)

Sufficient air exchange is necessary for the fireplace to operate properly and to maintain a good combustion. In an airtight household, the fireplace may not function as designed due to a lack of air; it is therefore recommended to install the fresh air kit in such cases. The fresh air system is an optional kit intended to bring combustion air into the fireplace from an exterior source.

Note that the LUMIS is designed to use a minimum amount of air during operation. Using an air exchanger or simply opening a nearby window/door during the ignition of the unit will achieve a similar result as the fresh air kit. When the fireplace is idle, there is no air escaping from the house through chimney. **Consult a local authority having jurisdiction (such as the fire department, the municipal building department, the fire prevention bureau) to determine if it is mandatory to install a fresh air kit in your area.**

Figure 4-6: Fresh Air Adapter Installation

General Notes:

The outside air kit should be installed according to the following guidelines:

- The air duct must have an inner diameter of 4 inches.
- The length of the air duct should not exceed 25 feet.
- The duct should not be elevated more than 10 feet from the base of the unit.
- Fresh air must come from the outside and not from another room or the attic.
- The outside register must be away from automobile exhaust fumes, gas meters, or other vents.
- Avoid installing the air register where it will likely be covered by snow or exposed to strong winds.
- The air register can be installed above or below the level of the fireplace.
- Use the SUPREME FIREPLACES INC. Fresh Air Adapter (ADP4_IN) sold separately.
- Use the SUPREME FIREPLACES INC. Fresh Air Kit (PEA4) and the white plastic air intake (UPEA4_LW) are sold separately.

Installation:

1. Cut 4 ½" diameter hole on the exterior wall of an ideal location.
2. Install the air register on the exterior wall.
3. Remove the 1.625" knockout from side wall of the circulating chamber and insert the fresh air adapter (ADP4_IN).
4. Secure the fresh air adapter to the side of the fireplace using two screws.
5. Install the air duct (PEA4) and secure it with worm gear clamps.

4.8 Surround Extension Kit (Optional)

The Surround Extension Kit offers a flexibility on the requirements of the depth within the masonry fireplace. The depth of the exterior case of the fireplace can be decreased or increased by subsequently increasing or decreasing the depth of the surround. The following instructions describes the installation of the Surround Extension Kit:

1. From within the surround, remove the serrated hex flange nuts holding the Top Frame and Side Frames; each part is held by 3 nuts.
2. Replace the framing (top and sides) with the Surround Extension Kit and fasten in place with the serrated hex flange nuts (3 per part). Note that some adjustment may be required for proper alignment.

The following table consists of the available extension kits per model:

Table 4-1: Surround Extension Kits – Product Information

Code	Model	Overall Depth
32LMFA_3EXT	LUMIS 32	3.00" (76 mm)
32LMFA_4EXT		4.00" (102 mm)

Figure 4-7: Surround Frame - Exploded View

5 TROUBLESHOOTING

5.1 Backdraft / Smoking

Draft is the force created by a difference in pressure, which moves air from the appliance up through the chimney. It is important to operate the LUMIS with proper draft to ensure optimal performance of the unit. Draft is depended on the length of the chimney, local geography, nearby obstructions and other factors. Proper draft results in an upwards flow through chimney, which prevents smoke infiltrating into the house during operation of the unit. As the temperature of the unit and chimney rises during combustion, the draft consequently increases due to a higher difference in pressure.

In contrast, backdraft is air flow from the chimney into the house, which results in smoke infiltration from the appliance and/or the chimney joints during operation. The unit is experiencing backdraft if air is flowing out from the exhaust of the baffle system (within the firebox). Backdraft is most commonly caused by fans around the house (such as in the kitchen and bathrooms) simultaneously in operation, another fireplace/stove within the household in operation, insufficient length of the chimney (less than 15 feet), inadequate ventilation, or a blocked chimney. Refer to the following suggestions to eliminate backdraft:

- Close any fans operating around the house (specifically for the duration of ignition).
- Clean the chimney of any obtrusions (when the unit is cold).
- Open one window or one door near the LUMIS.
- Heat the chimney.

5.2 Over Firing

The appearance of a red glow on the exterior of the firebox (top and sides) and/or on the flue is a sign of over firing. Excess air entering the firebox, over fueling, or an abnormal strong draft causes the unit to reach drastic temperatures from an uncontrollable combustion. Over firing is a safety hazard and may result in permanent damage to the unit. In the occurrence of over firing:

- a) Make sure the LUMIS door is properly closed.
- b) Manually close the Combustion Air Control by pulling the Activator (left lever).
- c) Turn on the blower to the maximum speed. The red glow on the exterior of the firebox and/or the flexible liner should gradually disappear.

WARNING: Do not touch hot surfaces with bare hands. Always wear heat protecting gloves and use fireplace tools.

Guideline to avoid over firing:

- Always keep the door closed during operation.
- Inspect regularly the door gasket/glass and replace accordingly.
- Always operate the unit with the chimney sweeping cap in position, blocking the hole in the baffle.
- Never load more than 32 lbs of wood at a time.
- Ensure that there is no excess draft.

WARNING: Failure to follow the above guideline will void the warranty. Over firing is a safety hazard, can cause irreversible damages to the LUMIS and will void the warranty.

6 MAINTENANCE

6.1 Disposal of Ashes

Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial on soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have been thoroughly cooled. It is good practice to leave a bed of ashes on the hearth approximately ½” thick. **CAUTION: Always wear heat resistant gloves when removing the ashes from the firebox.**

- a) Let the firebox cool to ambient temperature before removing the ashes. It is recommended to remove the ashes once the bed has exceeded a height of 4 inches.
- b) Slowly open the door to prevent ashes from coming into the room.
- c) Place an ash bucket (metal container) near the fireplace, onto the non-combustible hearth.
- d) Using a shovel and brush, remove the bulk of the ashes from the firebox into the ash bucket. Note that it is not necessary to keep a thin bed of ashes for the next fire.
- e) Store the ash bucket (with the tight-fitting lid) on a non-combustible surface, away from any combustible materials, pending final disposal.

6.2 Chimney Maintenance

Creosote – Formation and Need for Removal: When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapor condenses in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote makes an extremely hot fire. The chimney connector and chimney burning wood or coal should be inspected at least once every two months during the heating season to determine if creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire. Note that continuously operating the unit with green or wet wood will result in premature creosote buildup. **Never use chemical cleaners for your chimney.**

WARNING: In the case of a chimney fire:

1. Close the door of the fireplace.
2. Set the burn rate of the Combustion Air Control to minimum (Section 4.3 [Operating the Combustion Air Control](#)).
3. Call the local fire department (if assistance is needed).
4. Use a dry chemical fire extinguisher (baking soda or sand) to control the fire.
5. Get out of the house.

CAUTION: Never use water to extinguish a fire as it may result to dangerous steam explosions. Do not use the unit until the chimney is inspected and repaired (if needed) by a qualified technician.

NOTE: Do not clean the chimney when the unit is in operation/hot. Follow the instructions below for sweeping the chimney of a LUMIS fireplace insert:

- a) Open the door of the unit.
- b) From within the firebox, displace the chimney sweeping cap located in the baffle by lifting and moving it to the side.
- c) Close the door of the unit.
- d) Using an appropriate sized chimney sweeping brush, clean the chimney from any creosote buildup and other residues.
- e) Remove all the fallen/loose creosote/residues from the firebox and baffle system (a shop vacuum cleaner can be used for a thorough cleaning).

- f) Inspect and place of the chimney sweeping cap back in baffle opening.

CAUTION: Operating the unit without the chimney sweeping cap in position will result in over firing and void the warranty.

6.3 Cleaning of Glass

It is recommended to clean the glass door with a soft cloth, dampened with a non-abrasive solution, such as soap and water.

CAUTION: Cleaning the glass with an abrasive solution will result in surface scratches, reducing glass transparency and resistance to impacts.

The glass of the door may be cleaned with commercial products intended for fireplaces and stoves. After cleaning the glass, remove any remaining solutions with a wet cloth to avoid chemical reactions at elevated temperatures ("cloudiness" on the surface of the glass).

CAUTION: Do not apply commercial cleaners onto any painted surfaces as discoloration/peeling may occur.

NOTE: Never clean the glass when the unit is in operation or hot.

6.4 Replacing Cast Iron Panel

Three cast iron panels are assembled along the combustion chamber side walls (left, right, and back) allowing for a longer and a constant heat output. It is recommended to perform a periodic check on the condition of the panels to ensure proper operation of the unit. The cast iron panels need to be replaced when it is gravely chipped and/or cracked. Failure to replace the cast iron panel under the mentioned conditions will alter the performance of the unit. Refer to the following instructions for replacing a cast iron panel:

- a) Order the cast iron panel for the LUMIS 32 (32SFC1175 – 3X).
- b) Remove the door from the firebox and place it face down on a soft surface. NOTE: Rotate the handle to permit proper placing.
- c) Remove the bottom plate (hearth) by lifting it out of the firebox.
- d) Slide the back wall cast iron panel by tilting the bottom and swivelling them out of the top retainer.
- e) Replace the damaged cast iron panel if it was removed in step d) and position the panels back in place by swiveling them behind the top retainer.
- f) In the case of a damaged panel on the firebox side walls, replace the damaged panel and reposition the back wall panel by swiveling them behind the top retainer.
- g) Insert the bottom plate (hearth) and door to its original position.

WARNING: Do not operate the unit with any of the cast iron panels missing.

6.5 Replacement of Door Gasket

SUPREME FIREPLACES INC. assembles heat resistant graphite coated gaskets on the doors of all products, allowing for a proper seal of the unit at extreme temperatures (up to 538 °C / 1000°F). It is recommended to perform a weekly visual check on the condition of the ¾" gasket to ensure proper operation of the unit. The ¾" gasket of your door needs to be replaced when 1) the fibers of the gasket are coming loose and 2) the gasket is disintegrating (2 years). Failure to replace a gasket under the mentioned conditions can cause irreversible damage to the unit due to over firing. Refer to the following instructions for replacing the ¾" gasket:

- a) Order the replacement kit for the LUMIS 32 ¾" door gasket (GSK_75_7).
- b) Remove the door from the firebox and place it face down on a soft surface. NOTE: Rotate the handle to permit proper placing.

- c) Cover all painted surfaces of the door to avoid damages.
- d) Using a wedging tool or flat head screwdriver, gently remove the old 3/4" gasket (along with the old silicone) from the door framing.
- e) Apply a bead of high temperature silicone along the groove of the metal brackets.
- f) Place the new 3/4" gasket around the door framing and cut any excess gasket with scissors. NOTE: It is recommended to tape the extremity of the gasket for a cleaner result.

Give significant amount of time to allow the silicone to cure before reinstalling the door onto the firebox. A slight resistance is expected when closing the door with the new 3/4" gasket; the door will close normally after the gasket has taken proper shape.

6.6 Replacement of Glass

SUPREME FIREPLACES INC. uses a high quality 5mm thick Pyroceram III / Keralite ceramic glass that can withstand temperatures up to 704°C / 1300°F. It is recommended to perform a weekly visual check for any damages or cracks on the glass.

WARNING: Avoid striking the glass and slamming the door shut. Never operate the unit with a broken or damage glass.

CAUTION: Wear protective gloves when handling broken glass. Refer to the following instructions for replacing the glass:

- a) Order the replacement kit for the LUMIS 32 glass (PYRO_24.25"X17" – X1, GSK_31_7 – 2X, and GSK_75_7 – 1X).
- b) Remove, clean, and dispose any broken glass from the door and the surroundings.
- c) Remove the door from the firebox and place it face down on a soft surface. NOTE: Rotate the handle to permit proper placing.
- d) Using a wedging tool or flat head screwdriver, gently remove the 3/4" gasket (along with the silicone) from the door framing.
- e) Using a wrench, remove the 8 nuts fastened around the door framing.
- f) Remove the first row of metal brackets (2 small and 2 big) and thin gasket.
- g) Remove the damage glass and clean thoroughly the door framing from loose glass fragments.
- h) Place the new glass onto the second row of thin gasket, centered with the door framing.
- i) Place back the first row of metal brackets (2 small and 2 big) and thin gasket.
- j) Using a wrench, fasten the 8 nuts around the door framing (do not over-tighten).
- k) Apply a bead of high temperature silicone along the groove of the metal brackets.
- l) Place the 3/4" gasket back into position.

Give significant amount of time to allow the silicone to cure before reinstalling the door onto the firebox.

Figure 6-1: Exploded View of Door Assembly

Table 6-1: Parts List of Door Assembly

Item	LUMIS 22 Code	LUMIS 32 Code	Description	Qty
1	DR4110	DR1110	Door frame assembly	1
2	PYRO_18.75 X13.75	PYRO_24.25X 17	Pyroceram glass	1
3	DR_1988	DR_2525	Vertical metallic bracket	4
4	DR_1488	DR_1806	Horizontal metallic bracket	4
5	GSK_75_7	GSK_75_7	Thick gasket	1
6	GSK_31_7	GSK_31_7	Thin gasket	2
7	NUT 8-32	NUT 8-32	8-32 Nut	8

6.7 Door Latch Lubrication

Lightly lubricate the hook of door latch (SFC0031) with graphite grease on a yearly basis to prevent abrasive wear. Occasionally inspect the bushing of the door latch. If required, adjust the tightness of the latch bolt using a 5/32" hex key.

6.8 Paint

Paint touch-ups can be performed on the unit using a high temperature paint (in aerosol spray can format) by Stove Bright®. Refer to your invoice to determine the precise color of your unit¹⁰. Contact your local hearth shop for further information on purchasing this paint.

NOTE: Apply the paint in a well ventilated area. If applying paint to the door, properly cover/mask the glass of the door using painters tape and cardboard. Wait for paint to dry before operating the unit. Refer to the instructions on the label of the aerosol spray can for proper paint application. **WARNING: Never apply paint to the unit during operation or when it is hot.**

6.9 Removal of LUMIS

Occasionally, a technician or an inspector may require the fireplace insert to be temporarily removed from the masonry fireplace; therefore, refer to the following instructions for proper removal of the LUMIS:

- a) Remove and dispose any ashes from within the firebox (see Section 5.1 [Disposal of Ashes](#))
- b) Remove the door of the firebox and place it at a safe location to avoid any damage.
- c) Remove the surround of the unit by unscrewing the 4 screws at each corner of the door holder.
- d) From within the firebox, displace the chimney sweeping cap located in the baffle by lifting and moving it to the side.
- e) Straighten the clips of the adaptor.
- f) Use the handle to push the adaptor upwards and disconnect it from the firebox.
- g) Safely remove the fireplace insert.

Refer to Section 3 [INSTALLATION INSTRUCTIONS](#) for reinstalling the firebox and the surround.

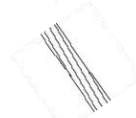

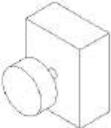

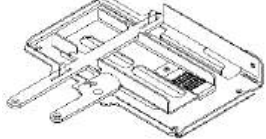

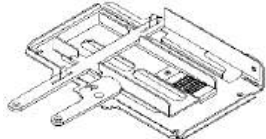

CAUTION: Never remove the fireplace insert while still in operation (hot).

6.10 Replacement Parts

Refer to the codes from the table below for any replacement parts:

Code	Description	Illustration

7 WARRANTY

SUPREME FIREPLACES INC. warrants that the factory-built fireplaces, fireplace inserts, and stoves will be free from defects in material and workmanship, under normal use and service, for a period of **ten (10) years** from the date of purchase.

This warranty is only intended for the original retail purchaser and is non-transferable, given that the product was purchased from SUPREME FIREPLACES INC. or one of its authorized dealers. This warranty is conditional upon correct installation and intended use of the products and does not cover damages caused by misuse. This warranty shall be void if the fireplace, fireplace insert or wood stove is not installed by an authorized qualified technician in accordance with the installation instructions in the manual provided with this product. The installation must meet local and national building codes.

Description	Coverage	Labour
Patented combustion air control, chimney sweeping cap, door handle (breakage only), door latch assembly, podium structure of wood stove series, legs of wood stove series, circulating chamber of fireplace insert series, bimetallic strip of combustion air control, removable ash lip, surround structure, cold hand key, wall intake and outtake grilles of gravity kit	10 years	2 years
Baffle (excluding bypass mechanism), bottom plate, stainless steel components, cast iron panel, firebox soapstone slab, exterior door frame, liner adaptor of Fusion series	5 years	2 years
Painted and plated parts, door gasket	2 years	1 year
Electrical components	2 years	90 days
Glass panel (thermal breakage only)	90 days	90 days

7.1 Warranty Limitations

Abuse and improper use of the unit may cause irreversible damage and will void the warranty.

Transportation, packaging, and other related costs or expenses arising from the replacement or repair of defective parts will not be covered by this warranty, nor will SUPREME FIREPLACES INC. assume responsibility for them.

Freight related damages of products that are shipped directly from the SUPREME INC. warehouse are covered under warranty if they were indicated on the Bill of Lading from the carrier and SUPREME FIREPLACES INC. is notified within 48 hours.

This warranty is void for any fireplace, wood stove or fireplace insert that wasn't purchased from an authorized SUPREME FIREPLACES INC. dealer.

The warranty does not cover any physical or esthetic damages that were caused by glass cleaners, soap, or any other cleaning products.

Soapstone is a natural material. Normal wear and tear of the soapstone may result in surface fractures or small hairline cracks. Since these do not affect the functionality nor the integrity of the product, the warranty only covers fractures that are over 3 mm thick and spread across one extremity of the slab to the other.

Deformations, discoloration, corrosion and scratches are not covered under warranty.

All parts are limited to one replacement per warranty term.

This warranty does not cover the labor or other related costs for the removal of a product already installed, the installation of a replacement product and the shipping and handling for the return of a product or for the replacement part.

This warranty applies to normal residential use only. Damages caused by acts nature or natural disasters, accidents, over firing, misuse, abuse, negligence, improper installation, alterations or substitutions of components of the fireplace, abrasives, chemical cleaners, and negligence are not covered by this warranty. Burning anything other than natural wood will damage your fireplace and void the warranty.

This warranty is void for any product that has been moved from its original installation location.

SUPREME FIREPLACES INC. will not be responsible for environmental conditions and drafting issues such as inadequate vents or ventilation, excessive venting configurations or negative air pressures which may or may not be caused by geographic elements, exterior elements and/or mechanical systems such as exhaust fans, furnaces, clothes dryers, etc.

The noise generated by the expansion and contraction of the metallic components is normal as they heat up and cool down and are not covered under the warranty.

Labour covered under the warranty must not exceed the retail price of the part being replaced, are based on a predetermined rate amount found in the dealer program, exclude dealer travel costs and are disbursed to the dealer.

The manufacturer at its discretion may decide to repair or replace any part or unit after inspection and investigation of the defect. The manufacturer may, at its discretion, fully discharge all obligations with respect to this warranty by refunding the wholesale price of the defective part(s).

The manufacturer shall in no event be responsible for any consequential damages of any nature, which are in excess of the original purchase price of the product.

Repairs and/or replacements of parts and labor covered under warranty must be preauthorized by SUPREME FIREPLACES INC.

A proof of purchase (copy of the invoice) is required for all warranty claims, as well as the completed warranty claim form and pictures/videos of the issue.

This **Limited Warranty** is effective on all appliances sold after May 31st, 2022, and supersedes any and all warranties currently in existence.

Please register your SUPREME product online at <https://supremem.com/warranty.php> to ensure full warranty coverage. Prior to contacting your dealer, have the following information available for warranty claim processing:

- **Customer information (name, telephone number, and address)**
- **Proof of purchase**
- **Model name and serial number (see Section 2.17)**
- **Detailed description of defected component**
- **Pictures (minimum of three)**
- **Videos of the issues**

In the case of a return for repair or replacement, it is the responsibility of the customer to adequately package the component/unit to prevent further damage during transport. Items sent to SUPREME FIREPLACES INC. without an open warranty claim will be returned to the sender.

APPENDIX 10: Laboratory Operating Procedures

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

INTRODUCTION

This document provides a step-by-step guide for the technician conducting tests to EPA standard requirements. Procedures outlined here, when followed, will result in tests in conformance with EPA Methods 28R, ASTM E2780, ASTM E2515, ASTM E2618, Method 28WHH, Method 28 PTS, Method ALT-125, ASTM E3053, ALT-134, ASTM E2779

The primary measurements to be made are particulate emissions rates. The technician's duties include the following steps.

1. Incoming inspection of test units.
2. Set-up of test units.
3. Preliminary testing to establish unit operating procedures and familiarity with operating controls.
4. Calibration of test equipment.
5. Set-up, checking and operation of sampling apparatus.
6. Conduct of tests including complete record keeping and data recording for non-automated functions.
7. Operation of hardware and software included in automatic data acquisition system.
8. Review and analysis of data at test completion to ensure test validity.

The technician running this test must be familiar with the following documents, which are to be kept in the laboratory at all, times.

EPA METHODS

1. EPA METHODS 28R
2. ASTM E2780
3. ASTM E2515
4. ASTM E2618
5. METHOD 28WHH
6. METHOD 28 PTS
7. ALT-125
8. ASTM E3053
9. ALT-134
10. ASTM E2779

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

I. APPLIANCE INSPECTION AND SET-UP

A. INCOMING INSPECTION

1. Check for completeness of unit including parts, accessories, installation and operating instructions, drawings and specifications etc. Note any discrepancies or missing parts or information.
2. Check for shipping damage. If damage has occurred, notify the laboratory manager. In some cases, repairs may be made, provided the manufacturer and laboratory manager concur that repairs will not affect the unit's performance. If damage is irreparable, a new unit will need to be obtained.
3. Note whether unit is catalytic or non-catalytic.
4. Mark unit with manufacturer's name, model number, work order number and date received.
5. If unit is safety listed, note label data including listing agency and serial number. If unit is not listed, mark all data sheets "UNLISTED". Test results will not be released until unit passes safety tests without modification unless authorized by laboratory manager.

B. UNIT SET-UP

1. All new units must be operated for a breaking in period as follows.
 - a) Fifty (50) hours at medium burn rate with Douglas Fir scrap or cordwood. Between 18% and 25% MC.

During these break-in runs the unit may be connected to a lab chimney and fuel additions noted into the corresponding data acquisition file. For catalytic units, a thermocouple must be installed in the catalyst.

Record catalyst temperature at 1-hour intervals or on chart recorder. Operating should continue until data shows at least fifty (50) hours of operation with catalyst temperature in excess of 500 degrees Fahrenheit (active range).

For non-catalytic units a stack thermocouple should be installed and stack temperature recorded at 1-hour intervals. 50 hours minimum burn time with a stack temperature of at least 250 degrees Fahrenheit is required.

Once break-in is completed, allow unit to cool. Clean unit thoroughly.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

2. Unit is to be placed on scale for testing. Prior to proceeding with verification process, scale should be turned on and allowed to warm up for one (1) hour minimum. Zero scale and check calibration with standard weights. One (1) 1 kg weight and one (1) 2 kg weight are provided for this purpose. Use scale verification test form no. EPA-7-TP to record results. If scale fails to reproduce weights within tolerance, check with laboratory manager before proceeding.
3. If scale checks out, place unit on scale and align so chimney will be centered in hood.
4. Attach chimney connector and chimney. Be sure all joints are sealed below sampling points. Chimney and connector should be cleaned with a wire brush. Be sure chimney connector terminates and chimney starts at proper level above scale platform. Chimney must be supported from scale so that it does not touch test enclosure or hood walls.
5. Thermocouples should be attached to surfaces of unit prior to testing. EPA requires a thermocouple on the bottom of the firebox. This must be installed prior to putting the unit on the scale. In some cases, the required thermocouple locations will be inaccessible on finished units. These units should have thermocouples installed by the manufacturer during construction. Check with the laboratory manager if problems are encountered in proper thermocouple attachment.
6. Measure firebox dimensions and record on data forms nos. EPA-2-TP. Make a three-dimensional sketch of the firebox including firebrick, baffles and obstructions. Calculate firebox volume in cubic feet with both addition and subtraction methods using forms nos. EPA-3-TP and EPA-4-TP. See Section 6.2.4 of EPA Method 28 for details of firebox volume determination.
7. If unit is catalytically equipped, additional thermocouples must be installed upstream and downstream of catalyst. Thermocouples should also be placed in the primary and secondary combustion chambers of all units.
8. Plug thermocouples into data acquisition system jacks making a check of locations and jack numbers for each test on data form no. EPA-5-TP.
9. Note that inserts are tested as if they are freestanding stoves.
10. Dilution tunnel should be cleaned prior to each certification test series and at anytime a higher burn rate follows a lower test burn rate.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

II. SAMPLING SYSTEM – SET-UP

A. GAS ANALYSIS

1. Instruments should be turned on and allowed to warm up for one (1) hour minimum.
2. Calibrate analyzers as follows:

NOTE: Prior to proceeding with calibration, make sure to use NIST traceable calibration gas bottles. Adjust flow meter, if necessary, at each instrument to required flow value.

- a) Using span gas, adjust span control to values specified on calibration gas label.
- b) Using nitrogene, adjust zero controls to provide a 0.00 analyzer readout.
- c) Repeat a) and b) until no further adjustment is required.
- d) Check readout vs. calibration gases (2) labels.

The CO₂ and CO analyzers are “ZEROED” on nitrogen. The O₂ analyzer is spanned on air and set for 20.9%. It is zeroed on nitrogen as well.

3. Check for response time synchronization.
 - a) With no fire in unit, allow reading to stabilize (O₂ should be 20.93, CO and CO₂ should equal 0).
 - b) Flow the calibration gas in the unit and start stop watch. Note the time required for each unit to reach .90 of the calibration gas bottle value. If all three analyzers reach this value within 15 seconds of each other, synchronization is adequate. If not, contact the laboratory manager. Synchronization is adjusted by internal instrument setting.
4. Set-up sample clean-up and water collection train as follows.
 - a) Load impingers as follows:
Impinger #1: 100 ml distilled water and 5 ml H₂SO₄
Impinger #2: 100 ml distilled water and 5 ml H₂SO₄
Impinger #3: Empty
Impinger #4: 200 – 300 grams silica gel (dry)
 - b) Place impingers in container and connect with “U TUBES”. Grease carefully on bottom half of ball joint so that grease will not get into tubes.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

- c) Connect filter to first impinger and sample line to last impinger.

- e. Leak check system as follows.
 - 1) Plug probe.
 - 2) Turn on sample system.
 - 3) Observe sample flow rotometer and vacuum gauge. If necessary, use vacuum; adjust valve to set vacuum to the maximum inches Hg.
 - 4) If the float in rotometer does not stabilize below 10 on scale, system must be resealed.
 - 5) Repeat leak check procedure until satisfactory results are obtained.

- f) Just prior to starting test, fill impinger container with water and ice and record ambient conditions on data form no. EPA-8-TP.

B. DILUTION TUNNEL SAMPLE TRAIN SET-UP

- 1. Filters and holders.
 - a) Clean probes and filter holder front housings carefully and desiccate for at least 48 hours prior to use.
 - b) Filters should be numbered and filter and probe combinations labeled prior to use.
 - c) Weigh desiccated filters and probe-filter units on analytical balance. Record weights data form no. EPA-10-TP. Note that probe and front half of front filter are to be weighed as a unit.
 - d) Carefully assemble filter holder units and connect to sampling systems. Check "DRIERITE" columns for adequate dry absorbent (blue).

- 2. Leak checking.
 - a) Each sample system is to be checked for leakage prior to inserting probes in tunnel.
 - b) Plug probes and start samplers, adjust pump bypass valve to produce a vacuum reading of 10 inches Hg. (NOTE: During test, vacuum must not exceed 10 inches unless posttest leak check shows acceptable results.)
 - c) Allow vacuum indication to stabilize for two (2) minutes, then record time and dry gas (DGM₁) and (DGM₂) meter readings. Wait ten (10) minutes and record dry gas meter readings again (DGM₃, DGM₄).

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

NOTE: If mark, system is leaking too much and all seals should be checked.

d) Calculate leakage rate as follows.

1) System 1: $\frac{(DGM_3 - DGM_1)}{10} = CFM_1$

2) System 2: $\frac{(DGM_4 - DGM_2)}{10} = CFM_2$

If CFM_1 or CFM_2 is greater than .02 CFM, leakage is unacceptable and system must be resealed.

If CFM_1 or CFM_2 is greater than $0.04 \times$ sample rate, leakage is unacceptable. For most tests, the sample rate will be about 0.15 CFM, thus leakage rates in excess of $0.04 \times 0.15 = 0.006$ CFM are not acceptable. Record leakage rates on form no. EPA-5-TP

e) Once leakage check is satisfactory, unplug probe and set flow to appropriate rate for test. This should be done in the minimum amount of time necessary and with the probes in ambient air. Do not insert probes in tunnel until the start of the test run. When flow is established, replug probes to prevent contamination.

III. TEST CONDUCT

A. FUEL LOAD

1. Determine optimum load weight by multiplying firebox volume in cubic feet by 7 or (10 and 12 for cordwood method). This is the load weight on an as-fired basis.
2. Determine piece size to obtain the requested load configuration and meet the test load weight criteria. The load should consist of the following: **TO BE DETERMINED**
3. Weigh out test load and adjust weight by shortening all pieces equally if necessary. Record individual piece load on form no. EPA-11-TP.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

4. Measure and record moisture content of each fuel piece using Delmhorst moisture meter. Determine if fuel load moisture content is in required range. If not, construct new load using wood with required moisture content. All wood in the humidity chamber should be within range. Contact project manager if you cannot find suitable pieces. Record moisture of each individual piece load on form no. EPA-11-TP.

B. UNIT START-UP

1. Before lighting a fire, turn on dilution tunnel and set tunnel velocity to 500ft/min Record readings on data form no. EPA-9-TP.
2. Check draft imposed on cold stove with all inlets closed and a draft gauge in the chimney. If draft is greater than 0.005 inches water column, adjust tunnel to stack gap until draft is less than 0.005.
3. Check for ambient airflow around unit with hot wire anemometer. Must be less than 50 ft/min.
4. Check all equipment for proper operation. Analyzers should be on and in sample mode. Computer should be loaded with test program and awaiting test start command.
5. Zero scale and start fire with uncolored newspaper and kindling representing 10 % of test load with the same type of fuel.
6. Once kindling is burning well after 5 minutes, add splitted pieces having a bottom surface around 4 sq. inches and representing 25% of test load weight. Operate at high fire for 15 minutes. Then adjust settings to intended test run levels as per the manufacturers.
7. Following addition of pretest fuel load (splitted pieces), start computer for data logging.
8. All fuel additions, air intake settings and operational characteristics shall be noted with associated time stamp on form no. EPA-1-TP.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

C. TEST RUN

1. Once the targeted test fuel bed weight is obtained, the test is to be started as follows:
 - a) Insert the sample probes into the tunnel being careful not to hit sides of tunnel with probe tip.
 - b) Check tunnel pitot tube for proper position. (Pitot should be carefully cleaned prior to each test.)
 - c) Turn on probe sample systems and stack sampler.
 - d) Open stove door, rake coals and load stove as follows: **TO BE DETERMINED**
 - e) Close door or follow manufacturer's start-up procedures. (Five (5) minutes maximum time before all doors and controls must be set to final positions for duration of test. 15 minutes or 15% of lad burned allowed for ALT-125 method))
 - f) An alarm will sound an audible signal at the (10) minutes intervals. This signals a reading interval. You must verify at each interval that the following readings are correctly logged by the data acquisition system and make observations of any unusual or non-routine events that could occur.
 - 1) Rotometer readings.
 - 2) Tunnel pitot tube reading.(Zero regularly between readings)
 - 3) Gas meter readings.
 - 4) Temperature readings.
 - 5) Draft reading
 - 6) Test load weight
 - 7) CO, CO₂ and O₂ readings
 - 8) Observations of any unusual or non-routine events.
 - g) During the test, any condition approaching unacceptable limits will be noted. The filter probes and housings are installed in small holders just outside the tunnel. If the filter temperature gets too high, you will have to increase the water flow through the cooling unit until acceptable temperatures are obtained. In between readings, check on other equipment. Be sure dryers and filters are working and monitor impinger train for proper water and ice levels etc.
 - h) When the fuel charge is consumed, it will signal end of test and shut down the sampling systems. When this occurs,

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

remove filter holder and probes from tunnel and impingers from sample line.

IV. POST TEST PROCEDURES

A. SAMPLE RECOVERY – FILTER TRAINS

1. Carefully clean outside of probes and filter housings with alcohol.
2. Disassemble filter holder and transfer filters to clean petri dish. Scrape gasket with scalpel and collect any loose material on filters.
3. Place probe and front half of first filter holders (still assembled) and filters in desiccator. Allow 48-hour desiccation before weighing.
4. Weigh probe filter holder units and filters at six (6) hour intervals minimum until weight change between weightings is less than 0.2 mg. Record all weights taken on data form no. EPA-10-TP.

B. CALCULATION OF RESULTS

The computer program carries out all final calculations. When run, it will ask for data from forms used during the test. Enter data as called for.

GENERAL

This guide cannot cover every possible contingency, which may develop during a particular test program. Many questions, which may arise, can be answered by a complete understanding of the test standards and their intent. When in doubt on any detail, check with the laboratory manager and be sure you understand the procedures involved.

It is critical that all spaces on the data forms be properly filled in. Each test must be represented by a complete record of what was done and when.

ASTM E2515-11

ASTME2618

Dry burn rate (BR)

Equation used

B415.1, 13.4

$$BR = \left[\frac{60W_{WD}}{\theta} \right] \left[\frac{100 - \%M_W}{100} \right]$$

Nomenclature

BR	Dry wood burn rate, kg/hr (lb/hr)
W_{WD}	Total mass of wood burned (wet basis) during the test run, kg (lb)
θ	Total time of test run, minutes
$\%M_W$	Average moisture in test fuel charge, wet basis, % To convert from dry basis to wet basis: % moisture wet basis =

Sample calculation

Data

W_{WD}	12,702 lbs
θ	532 min
$\%M_W$	16,71 %

Calculation

BR	0,541 Dry kg/hr
----	-----------------

Volume of gas sample corrected to dry standard conditions ($V_{m(std)}$)

Equation used

ASTM 2515, equation 6

$$V_{m(std)} = K_1 V_m Y \left[\frac{P_{bar} + \left(\frac{\Delta H}{13.6} \right)}{T_m} \right]$$

Nomenclature

$V_{m(std)}$	Volume of gas sample , corrected to standard conditions, dscm ³ (dscf)
K_1	17.64 R/in Hg
V_m	Volume of gas sample
Y	DGM calibration factor
P_{bar}	Barometric pressure mmHg (in Hg)
ΔH	Average pressure at the outlet of the dry gas meter mm water (in. Water)
T_m	Absolute average dry gas meter temperature K (R)

Sample calculation

Data

V_m	103,11 dcf
Y	1,00605
P_{bar}	29,68 in Hg
ΔH	-1,0235 in Hg
T_m	542,4 R

Calculation

$V_{m(std)}$	96,66 dscf
--------------	------------

Total amount of particulate matter collected (m_n)

Equation used

ASTM 2515, equation 12

$$m_n = F_1 + F_2 + \Delta PF$$

Nomenclature

m_n Total amount of particulate matter collected, mg

F_{1+F2} Particulate matter collected on filters, mg

ΔPF Post-test weight gain of probe and filter holder assembly, mg

Sample calculation

Data

F_{1+F2} 0,0072 g

ΔPF 0,002 g

Calculation

m_n 8,900 mg

Calculation based of train 2 data

Particulate concentration (C_s)

Equation used

ASTM 2515, equation 13

$$C_s = (0,001 \text{ g/mg}) \times \left(\frac{m_n}{V_{m(\text{std})}} \right)$$

Nomenclature

C_s	Concentration of particulate matter in stack gas or dilution tunnel, dry basis, corrected to standard conditions, g/dsm^3 (g/dscf)
m_n	Total amount of particulate matter collected in the sampling train, mg
$V_{m(\text{std})}$	Volume of gas sample measured corrected to dry standard conditions, dsm^3 (dscf)

Sample calculation

Data

m_n	8,900 mg
$V_{m(\text{std})}$	96,66 dscf

Calculation

C_s	0,000092 g/dscf
-------	-----------------

Calculation based of train 2 data

Adjustment factor for alternative pitot tube placement (FP)

Equation used

ASTM 2515, equation 1

$$F_P = \frac{V_{strav}}{V_{scent}}$$

Nomenclature

V_{strav}	Average gas velocity cacluated after the Pitot tube traverse
V_{scent}	Average gas velocity at the center of the dilution tunnel cacluated after the multi-point Pitot traverse
F_P	Adjustment factor for center of tunnel pitot tube placement

Sample calculation

Data

V_{strav}	0,218792335
V_{scent}	0,23558199

Calculation

F_P	0,928731
-------	----------

Average dilution tunnel gas velocity (V_S)

Equation used

ASTM 2515, equation 9

$$V_S = F_p K_p C_p (\sqrt{\Delta P})_{avg} \sqrt{\frac{T_S}{P_S M_S}}$$

Nomenclature

V_S	Average dilution tunnel gas velocity, m/s (ft/s)
K_p	Pitot tube constant For the metric units: $34.97 \text{ m/sec} \left[\frac{(\frac{g}{g\text{-mole}})(\text{mm Hg})}{(^{\circ}\text{K})(\text{mm H}_2\text{O})} \right]^{1/2}$ For English units: $85.49 \text{ ft/sec} \left[\frac{(\frac{\text{lb}}{\text{lb-mole}})(\text{in Hg})}{(^{\circ}\text{R})(\text{in H}_2\text{O})} \right]^{1/2}$
C_p	Pitot tube coefficient (use 0.99 for standard pitot tube, 0.84 may be used for S-type tubes constructed according to Method 2 specifications)
F_p	Pitot tube correction factor
$(\sqrt{\Delta P})_{avg}$	Average square root of each individual velocity head (ΔP)
P_{bar}	Barometric pressure at measurement site, mm H ₂ O (in. H ₂ O)
P_g	Stack static pressure, mm Hg (in. Hg)
P_S	Absolute dilution tunnel static gas pressure, mm Hg (in. Hg), or $P_{bar} + P_g$
M_S	Molecular weight of dilution tunnel gas, wet basis, g/g-mole (lb/lb-mol) may be assumed to be 28.78 or 29 for CSA B415
t_s	Dilution tunnel temperature, °C (°F)
T_S	Absolute dilution tunnel temperature, °K (°R), or $273 + t_s$ for metric units, $460 + t_s$ for English units

Sample calculation

Data

K_p	85,49
C_p	0,99
F_p	0,929
$(\sqrt{\Delta P})_{avg}$	0,2288 in H ₂ O ^{1/2}
P_{bar}	29,68 in Hg
P_g	0,23 in H ₂ O
P_S	29,69 in Hg
M_S	29 lb/lb-mol
t_s	91,66 F
T_S	551,66 R

Calculation

V_S	14,3974 ft/s
-------	--------------

Average dilution tunnel gas flow rate (Qstd)

Equation used

ASTM 2515, equation 3

$$Q_{std} = 60(1 - B_{WS})V_S A \left(\frac{T_{std}}{T_S} \right) \left(\frac{P_S}{P_{std}} \right)$$

Nomenclature

Q_{std}	Total gas flow rate corrected to dry standard conditions, dsm^3/min (dscf/min)
60	Conversion factor minutes per hour
B_{WS}	Water vapour in the dilution tunnel stream, proportion by volume (may be assumed to be 2%)
V_S	Average dilution tunnel gas velocity, m/s (ft/s)
A	Cross-sectional area of dilution tunnel, m^2 (ft^2)
T_{std}	Standard absolute temperature, 293 °K (528°R)
T_S	Absolute average dilution tunnel temperature, °K (°R), or $273 + t_s$ for metric units, $460 + t_s$ for English units
t_s	Dilution tunnel temperature, °C (°F)
P_S	Absolute dilution tunnel static gas pressure, mm Hg (in. Hg), or $P_{bar} + P_g$
P_{bar}	Barometric pressure at measurement site, mm Hg (in. Hg)
P_g	Dilution tunnel static pressure, mm Hg (in. Hg)
P_{std}	Standard absolute pressure, 760 mm Hg (29.92 in. Hg)

Sample calculation

Data

B_{WS}	0,02
V_S	14,397
A	0,196 ft^2
T_{std}	528 R

Calculation

Q_{std}	157,90 dscf/min
-----------	-----------------

Particulate emission rate (E)

Equation used

$$E = (C_S - C_r)Q_{std}$$

Nomenclature

E	Particulate emission rate, g/hr
C_S	Concentration of particulate matter in stack gas or dilution tunnel gas, dry basis corrected to standard conditions, g/dscm ³ (g/dscf)
C_r	Concentration of particulate matter in room air, g/dscm ³ (g/dscf)
Q_{std}	Total gas flow rate, dry basis corrected to standard conditions, dsm ³ /min (dscf/min)

Sample calculation

Data

C_S	0,000092 g/dscf
C_r	0,000001 g/dscf
Q_{std}	157,90 dscf/min

Calculation

E	0,01 g/min
E	0,86 g/h

Calculation based on train 2 data.

Total particulate emission rate (E_T)

Equation used

ASTM 2515, equation 15

$$E_T = (C_S - C_r)Q_{std}\theta$$

Nomenclature

E_T	Total particulate emission, g
C_S	Concentration of particulate matter in stack gas or dilution tunnel gas, dry basis corrected to standard conditions, g/dscm ³ (g/dscf)
C_r	Concentration of particulate matter in room air, g/dscm ³ (g/dscf)
Q_{std}	Total gas flow rate, dry basis corrected to standard conditions, dsm ³ /min (dscf/min)
θ	Total sampling time, min

Sample calculation

Data

C_S	0,000092 g/dscf
C_r	0,000001 g/dscf

E 7,62 g
Calculation based on train 2 data.

Average gas velocity in dilution tunnel during each min interval, i, of the test run

Equation used

ASTM 2515, equation 10

$$v_{si} = F_p K_p C_p \sqrt{\Delta p_i} \sqrt{\frac{T_{si}}{P_s M_s}}$$

Nomenclature

	Average gas velocity in dilution tunnel during each min interval, i of the test run
v_{si}	m/sec (ft/sec)
F_p	Pitot tube correction factor
K_p	Pitot tube constant
	For the metric units: $34.97 \text{ m/sec} \left[\frac{(\frac{g}{g\text{-mole}})(\text{mm Hg})}{(^{\circ}K)(\text{mm H}_2\text{O})} \right]^{1/2}$
	For English units: $85.49 \text{ ft/sec} \left[\frac{(\frac{lb}{lb\text{-mole}})(\text{in Hg})}{(^{\circ}R)(\text{in H}_2\text{O})} \right]^{1/2}$
C_p	Pitot tube coefficient (use 0.99 for standard pitot tube, 0.84 may be used for S-type tubes constructed according to Method 2 specifications)
Δp_i	interval, i, of the test run
T_{si}	Absolute average gas temperature in the dilution tunnel during the i^{th} minutes
P_s	Absolute dilution tunnel static gas pressure, mm Hg (in. Hg), or $P_{\text{bar}} + P_g$
M_s	Molecular weight of dilution tunnel gas, wet basis, g/g-mole (lb/lb-mol) may be assumed to be 28.78

Sample calculation

Percent of proportional sampling rate (PR)

Equation used

B415, equation 13.1

$$PR = \left(\frac{\theta V_{mi(std)} V_S T_m T_{Si}}{\theta_i V_m V_{Si} T_{mi} T_S} \right) \times 100$$

Nomenclature

PR	Percent of proportional sampling rate (%)
θ	Total sampling time, min
θ_i	Time of interval, 1 min
V_m	Volume of gas sample measured by the DGM, dsm ³ (dscf)
$V_{mi(std)}$	Volume of gas sample measured by the digital mass flow controller during the i th 1 minutes interval, dsm ³ (dscf)
V_S	Average gas velocity in the dilution tunnel, ft/min
V_{Si}	Average gas velocity in the dilution tunnel during the i th 10 minutes interval, ft/min
T_m	Absolute average digital mass flow controller temperature, K (R)
T_{mi}	Absolute average digital mass flow controller temperature during the i th 1 minutes
T_S	Absolute average gas temperature in the dilution tunnel, K (R)
T_{Si}	Absolute average gas temperature in the dilution tunnel during the i th 1 minutes

Calculated with CO concentration values.

APPENDIX 12: Volume calculations

1 Volume Calculations

The usable firebox of the 22IN (V_U) consists of a trapezoidal prism with a front width of 17.75 in (W_{U1}), a back width (W_{U2}) of 14.38 in, a depth of 14.63 in, a front height (H_{U1}) of 14.25 in, and a back height (H_{U2}) of 13.88 in, making a 1.91 ft³ combustion chamber (refer to Figure 4-1).

Figure 1-1: 22IN Usable Firebox

$$V_U = \left[\left(\frac{W_{U1} + W_{U2}}{2} \right) * D_U * H_{U2} \right] + \left[\left(\frac{W_{U1} + W_{U2}}{2} \right) * D_U * \left(\frac{H_{U1} - H_{U2}}{2} \right) \right]$$

$$V_U = \left[\left(\frac{17.75 + 14.38}{2} \right) * 14.63 * 13.88 \right] in^3 + \left[\left(\frac{17.75 + 14.38}{2} \right) * 14.63 * \left(\frac{14.25 - 13.88}{2} \right) \right] in^3$$

$$V_U = 3,262.23 in^3 + 43.48 in^3 = 3,305.71 in^3 = 1.91 ft^3$$

The non-usable section of the firebox consists of the front portion facing the door, where the load cannot be placed due to the angled flanges of the 1/4" hearth plate. This portion of the firebox (V_{NU}) consists of a trapezoidal prism with a front width (W_{NU1}) of 18.27 in, a back width (W_{NU2}) of 17.75 in, depth of (D_{NU}) 2.25 in, and a height of (H_{NU}) 12.25 in, making a 0.29 ft³ combustion chamber (refer to Figure 4-2).

Figure 1-2: 22IN Non-Usable Firebox

$$V_{NU} = \left(\frac{W_{NU1} + W_{NU2}}{2} \right) * D_{NU} * H_{NU} = \left[\left(\frac{18.23 + 17.75}{2} \right) * 2.25 * 12.25 \right] in^3 = 495.85 in^3 = 0.29 ft^3$$

The total firebox volume (V_T) is therefore calculated by adding the usable portion (V_U) with the non-usable portion (V_{NU}) which result to $2.20 ft^3$.

$$V_T = V_U + V_{NU} = 1.91 ft^3 + 0.29 ft^3 = 2.20 ft^3$$

Foyers Supreme Inc. 22IN EPA - Determining the Firebox Length for Fuel Length Calculation:

The firebox geometry of the 22IN from a top view is a trapezoid, where the front length is greater than the back length. The following criteria need to be satisfied to determine the fuel piece length and crib configuration (ASTM2780-10):

- 1) Firebox length is determined with the longest horizontal chamber dimension where fuel pieces might reasonably be placed that is parallel to a wall of the chamber.¹
- 2) Test fuel crib loading density shall be 7 +/- 0.7 lbs/ft³ of the usable firebox volume on a wet basis.²
- 3) Each test piece (not including spacers) shall be of equal length (except to satisfy load density criteria) and shall closely approximate 5/6 the dimensions of the firebox length.³
- 4) Alterations to the shape of the fuel crib are to be applied to resemble the geometry of the firebox volume.⁴

The following are the steps and calculations in determining the log length based on the criteria from the ASTM 2780-10 testing standard:

- A. The front width of the firebox has a dimension 17.75". However, 3.2.8 states that the length is determined by a location where fuel pieces can be reasonably place, which would be 5" within the firebox to accommodate the fuel piece and spacers. Therefore, the firebox length is determined to be **16.596"** based on 3.2.8.
- B. Given that the dimension of the firebox is trapezoidal, 9.4.1.6 requires that the fuel crib pieces to be altered to resemble the geometry of the firebox volume. Therefore, we determined that the range of the firebox length for calculating the length of the fuel pieces is between **14.375"** (back width) and **16.596"** (B).
- C. It was determined that the mid-point (**16.063"**) of the firebox made an adequate firebox length for calculating the length of the fuel piece:
 - a. It was between the **14.375"** and **16.596"** range we determined in B.
 - b. Capable of meeting the fuel density criteria (9.4.1.5).
 - c. Shape of the fuel crib gave an accurate representation with respect to the firebox geometry.
 - d. This resulted with the fuel pieces having the rounded length of **13.500"**.

Calculation:

$$\text{Fuel Length} = \frac{5}{6} * \text{Determined Firebox Length} = \frac{5}{6} * 16.063 = 13.386" \approx 13.500"$$

1 Unit Pre-Burn

1.1 Load

- 2" X 4" X 12" – 11 to 12 pc

1.2 Load Configuration

- 1st Row – 12" (3 pc) – North-South Center/Front

- 2nd Row – 12" (2 pc) – East-West Center/Back

- 3rd Row – 12" (5 pc) – North-South Center/Front

- 4th Row – 12" (1 to 2 pc) – East-West Center/Back

The total weigh of the preload should be between 15.5 to 16 lbs

2 Test

2.1 Load

- 2" X 4" X 13.5" – 3 pc (4 spacers) – Humidity 19 to 20 %
- 4" X 4" X 13.5" – 2 pc (4 spacers) – Humidity 19 to 20 %
- Weight: 12.5 to 13.0 lbs

2.2 Load Configuration

1. Place a 2" X 4" upright (spacers up-down) at the back of the firebox East-West.
2. Place a 4" X 4" in front of the piece from step 1. East-West.
3. Place a 2" X 4" on top of the piece from step 2.

Use the figures from Section 2.1 as a reference.

2.3 Low Burn Rate Test

1. Set the Primary Air Control to the maximum with the Activator lever (left) pushed back (Figure 2-1).
2. Place the preload wood as described in Section 1.2.
3. Ignite the preload at the bottom cavities between the 2" X 4" X 12" pieces.
4. Start the blower once the temperature of the top has exceeded 625 degrees Fahrenheit.
5. Between 6 to 7 lbs, set the Primary Air Control to the minimum position (Figure 2-2).
6. With a weight above 3.5 lbs, open the door and mix the wood with the unit when the temperature of the top goes below 425 degrees Fahrenheit. Place the unburnt pieces at the front.
7. At 3.2 lbs, level the coal bed.
8. Start the test when the temperature at the top of the unit is between 210 and 215 degrees Fahrenheit.
9. Test Fuel Crib Adjustment (Section 9.5.7 of ASTM E2780-10) might be required once the delta T has attained -90 degrees given that the criteria have been satisfied within the test method.

Figure 2-1: Primary Air Control Fully Open - Ignition Position

Figure 2-2: Primary Air Control Minimum Burn Rate Position

2.4 Medium Burn Rate Test

1. Set the Primary Air Control to the maximum with the Activator lever (left) pushed back (Figure 2-1).
2. Place the preload wood as described in Section 1.2.
3. Ignite the preload at the bottom cavities between the 2" X 4" X 12" pieces.
4. Start the blower once the temperature of the top has exceeded 625 degrees Fahrenheit.
5. Between 7 to 8 lbs, set the Primary Air Control to the medium position (Figure 2-3).
10. With a weight above 3.5 lbs, open the door and mix the wood with the unit when the temperature of the top goes below 425 degrees Fahrenheit. Place the unburnt pieces at the front.
6. At 3.2 lbs, level the coal bed.
7. Start the test when the temperature at the top of the unit is between 240 and 250 degrees Fahrenheit.

2.5 High Burn Rate Test

1. Set the Primary Air Control to the maximum with the Activator lever (left) pushed back (Figure 2-1).
2. Place the preload wood as described in Section 1.2.
3. Ignite the preload at the bottom cavities between the 2" X 4" X 12" pieces.
4. Start the blower once the temperature of the top has exceeded 625 degrees Fahrenheit.
5. With a weight above 3.5 lbs, open the door and mix the

Figure 2-3: Primary Air Control Medium Burn Rate Position

wood with the unit when the temperature of the top goes below 425 degrees Fahrenheit. Place the unburnt pieces at the front.

6. At 3.2 lbs, level the coal bed.
7. Start the test when the temperature at the top of the unit is between 250 and 265 degrees Fahrenheit.

Figure 2-4: Primary Air Control High Brun Rate Position

APPENDIX 14: Drawing Air flow pattern

1 Air Flow Patterns

The primary air enters the unit from two channels; the air wash and the booster. The opening of the channels is regulated by an automatic bi-metal control (refer to Section 15). Please refer to Figure 3-1 and Figure 3-2.

The secondary air enters the combustion chamber from the top and through the baffle system. Please refer to Figure 3-3.

COMPLIANCE STATEMENTS AND ACKNOWLEDGEMENTS — SECTIONS 60.533(B) AND 60.5475(B)

INSTRUCTIONS: PLEASE READ THE BELOW STATEMENTS AND AFFIRMATIONS AND ADDRESS ACCORDINGLY.

FOR EMISSIONS DATA SUMMARY TABLES SEE ATTACHMENTS

1. Engineering Drawings Statement

Foyers Supreme Incorporated has provided as CBI information along with the report engineering drawings and specifications of components that may affect emissions (including specifications for each component listed in paragraphs (k)(2), (3) and (4) of 60.533(b) and 60.5475(b). All K list component drawings contain full measurements and dimensions as required. All tolerances of components identified in paragraph (k)(2) of 60.533(b) and 60.5475(b) are in compliance with the allowable tolerances as specified per the CFR. The drawings and/or manual identify how the emission critical parts, such as baffle and air control can be readily inspected and replaced.

2. Firebox Statement Requirement

Foyers Supreme Incorporated will manufacture the firebox composed with the same materials from the material used for the firebox or firebox component in the wood heater on which certification testing was performed.

3. CBI

Foyers Supreme Incorporated has clearly labeled all confidential business information (CBI). Both CBI and Non-CBI reports have been provided electronically.

4. Valid Certification Statement

Foyers Supreme Incorporated has submitted a test report that contains the information required for report submittal per the CFR. This includes a summary table that clearly presents the individual and overall emission rates, efficiencies and heat outputs.

5. Warranties

Foyers Supreme Incorporated has provided a copy of the warranties for the model line, which includes a statement that the warranties are void if the unit is used to burn materials for which the unit is not certified by the EPA and void if not operated according to the owner's manual.

6. Q/A Statement

Foyers Supreme Incorporated will conduct a quality assurance program for the model line that satisfies the requirements of paragraph (m) of the CFR.

7. Laboratory Sealing of Unit

Services Polytests Inc. (laboratory) has sealed the tested unit [Lumis 22 (22IN), Flair 29 (22IN), and Regal 22 (22IN)] after completion of the test series and the unit will be stored at Foyers Supreme Incorporated facility for a minimum of 5 years from the completion of the certification test.

8. Statements that the wood heaters manufactured under this certificate will be—

- (i) The unit tested [Lumis 22 (22IN), Flair 29 (22IN), and Regal 22 (22IN)] is similar in all material respects that would affect emissions as defined in §60.531 to the wood heater submitted for certification testing, and labeled as prescribed in §60.536 and 60.5478.
- (ii) Foyer Supremes Incorporated has provided an owner's manual that meets the requirements in § 60.536 and 60.5478. In addition, a copy of the owner's manual will be submitted to the Administrator and be available to the public on the Foyers Supreme Incorporated's web site.

9. Third Party Certification Statement

Foyers Supreme Incorporated has contracted an approved laboratory (Services Polytests Inc.) and an approved third-party certifier (PFS-TECO) whom satisfies the requirements of paragraph (f) of the CFR.

10. Approved laboratory/third party Statement

The test laboratory (Services Polytests Inc.) and approved third-party certifier (PFS-TECO) are authorized to submit information on behalf of the Foyers Supreme Incorporated, including any claimed to be CBI.

11. Manufacturer's Website Certification Test Reports Availability Statement

Foyers Supreme Incorporated agrees to place a copy of the certification test report and summary on its web site available to the public within 30 days after the Administrator issues a certificate of compliance.

12. Transferability Acknowledgement Statement

Foyers Supreme Incorporated acknowledges that the certificate of compliance cannot be transferred to another manufacturer or model line without written approval by the Administrator.

13. Statement about Selling Wood Heaters without an EPA Certificate

Foyers Supreme Incorporated acknowledges that it is unlawful to sell, distribute or offer to sell or distribute an affected wood heater without a valid certificate of compliance.

Print Name and Title:

Alexander Marcakis, Vice-President

Date:

12th of July, 2023

Signature of responsible representative of the manufacturer certifying the accuracy of the above statements:

The authorized person whose signature is above certifies that the appliance [Lumis 22 (22IN), Flair 29 (22IN), and Regal 22 (22IN)] as tested is in compliance with all certification requirements of the 2015 NSPS. Foyers Supreme Incorporated (manufacturer) also acknowledges that we remain responsible for compliance regardless of any error by the test laboratory (Services Polytests Inc.) or third-party certifier (PFS-TECO).

Subject: RE: Foyers Supreme Inc.: 22IN EPA Report

Dear Mr. Scinta,

Prior to taking a decision on the interpretation of the Category 4 (maximum burn rate), I would ask you to kindly take into consideration the following points:

- 1) OECA is currently reviewing emissions reports under the Method 28R (in effect as of March 2015), which is a standard that states to apply burn rates from Method 28 – ***“2.1.1 The burn rate categories, low burn rate***

requirement, and weightings in Method 28 shall be used.” Please see section 2.1.1 from : [method 28r.pdf \(epa.gov\)](#). This statement in the procedures of Method 28R makes reference to a the standards applied prior to the March 2015 ruling; therefore, any active ADIs offering further explanation (such as WDS-105) to the burn rate categories, low burn rate requirement, and weightings of the Method 28 are to be applied to the Method 28R.

- 2) Based on the Wood Stove Database (Room Heaters), performing a search under “Crib Wood” in “Certified Fuel Type” (unfortunately a search by “Test Method Type” - “28R” was not active) produced a list of 75 wood heaters that are currently certified for NSPS 2020 Standard. From that list, approximately 13 units were certified under “Single Burn Rate”. From the 62 units that were certified under “Adjustable Burn Rate”, approximately 25% had a Category 4 test under 1.9 kg/hr (it should be noted that these units have firebox volumes approximately 2.2 cubic feet and lower). Based on this research, it appears that OECA were granting certifications for units burning under 1.9 kg/hr for Category 4.
- 3) My third point is based more on a technical and safety perspective. As mentioned in Point 2, smaller firebox volumes statistically produce a smaller maximum burn rate. There are many factors explaining this, one being that the test for the smaller units require less wood, which usually results in a smaller burn rate with respect to larger firebox volumes. Alternating the design of these small units to reach above the 1.9 kg/hr may cause safety concerns and product durability issues. In our case, our certified units are used for Factory Built fireplaces, which must be tested under UL 127 safety standard – a 1.8 cubic foot fireplace with a maximum burn rate above 1.9 kg/hr would have great difficulty passing the safety certification.

Please feel free to contact me, Danick from Polytests, and John from PFS-TECO if any clarifications are required on the points above.

Sincerely,

Alexander Marcakis

Alexander,

The ADIs that have been done in this sector were done by OECA under the old NSPS provisions. You will need to check with Robert Scinta at OECA to see if that would apply in this instance.

Best regards,

Stef Johnson

Hi Stef,

I know that John and Danick have worked with you for many years and would truly appreciate your input in this meeting. With that being said, we could push back this meeting to the week of the 12th of September. Please confirm your availability.

On a parallel note, it seems that a similar issue has been addressed in the past with EPA. John from PFS-TECO has managed to retrieve an ADI clarifying the Category 4 run. Please let me know what you think.

Sincerely,

<image001.png>

Hi Alexander,

After today I am out of the office until September 12th. If you need resolution earlier I suggest that you call Dr. Rafael Sanchez at OECA.

Thank you,

Stef Johnson

Hi Stef,

Thanks for taking my call earlier.

After speaking with Danick from Polytests and John from PFS-TECO, they have some concerns/questions regarding the interpretation of the Category 4 burn rate. Would it be possible to schedule a teleconference meeting next week to further discuss? Please confirm on your availability.

Sincerely,

<image001.png>

Dear Mr. Marcakis,

By our read, Category 4 begins > 1.90 kg/hr.

Is this helpful?

Thank you,

Steffan Johnson

Hello Steffan,

Thanks for the response.

The statement from your e-mail doesn't correspond with the criteria for a maximum burn rate (Category 4) within the test method. Method 28 (testing with crib wood) describes a maximum burn rate (Category 4) with the air supply set to the maximum, which corresponds with our run 5 in this test report. Method 28 doesn't specify a range in kg/hr which this category is suppose to fall into. I've included the extract from the Method 28 test method below :

<image002.png>

Given the above information, I would ask that you kindly reconsider our initial suggestion of including the following statement into the report:

It is possible that a Category 3 run with a air control setting near the maximum position may burn quicker (larger burn rate) than a Maximum air control setting run due to the many factors effecting the operation of a wood heater, such as:

1. ***Humidity level of the load***
2. ***Density of the load***
3. ***Atmospheric pressure***

4. Humidity level in the air

Sincerely,

<image001.png>

Greetings Alexander,

Thank you for sending this question to the Measurement Technology Group.

We have reviewed the information that you have provided and given the data provided we find that your testing is not yet complete at this time.

It is fine that your attempt at a medium burn exceeded your attempt at a maximum burn, and both of these test runs will need to be averaged to represent the medium burn rate category in your final report as they are both medium burn rate tests.

What is missing from your report is a MAX category test run, as both of the aforementioned test runs failed to land within that category.

Note that the test method has a path to exclude testing at the low burn rate by demonstrating failed test runs at those low levels, however there is no pathway in the test method for exempting a certification test from conducting a Max (category IV) test. You must conduct a test that falls within that category.

I hope that this is helpful information. Please don't hesitate to reach back out with any further questions.

Very sincerely,

Stef Johnson

Subject: Foyers Supreme Inc.: 22IN EPA Report

Hi Stef and Angelina,

PFS TECO is currently reviewing the EPA report of the 22IN wood heater model for the CoC and suggested that we get in touch with you to see how to proceed with clarifying a certain point within the results. The objective is to assure that no confusion is brought to anybody reviewing the report.

Below is an overview of the valid test runs:

Test No.	Burn Rate (Kg/hr)	(E) Ave. Emission Rate g/hr	Position of Air Control
3	0,81	1,051	Minimum (Cat 2)
2	0,83	0,748	Minimum (Cat 2)
4	1,09	1,056	Medium (approx. halfway position) (Cat 2)
5	1,44	1,793	Maximum (Cat 3)
6	1,56	1,844	Medium (approx. 90% open with respect the maximum position) (Cat 3)

The point we would like to clarify within the report is that the Run 5 (maximum) resulted in a smaller burn rate than Run 6 (medium - approx. 90% open with respect the maximum position). I was suggesting we add the following note clarifying this result:

It is possible that a Category 3 run with a air control setting near the maximum position may burn quicker (larger burn rate) than a Maximum air control setting run due to the many factors effecting the operation of a wood heater, such as:

1. ***Humidity level of the load***
2. ***Density of the load***
3. ***Atmospheric pressure***
4. ***Humidity level in the air***

A similar statement can be added in the operations manual.

Please confirm whether we could proceed with adding this statement into the report for clarification purposes.

Sincerely,

<image001.png>

<adi-woodstoves-wds-105.pdf>

U.S. Environmental Protection Agency Applicability Determination Index

Control Number: WDS-105

Category: Woodstoves
EPA Office: SSCD
Date: 05/03/1988
Title: Test Runs
Recipient: Fesperman, Jim
Author: Seitz, John S.

Subparts: Part 60, AAA, New Residential Wood Heaters

References: Method 28

Abstract:

See below. Determination available in abstract form only. Included under "Letter" field to facilitate database word searching.

Letter:

Control Number: WDS-105

"Three test runs were performed on a stove. Category 1 and Category 2 were achieved without difficulty. The third test run was performed with the air setting fully open, but fell into Category 3. A fourth test was made using the manufacturer's recommended settings for Category 3. This run, however fell into Category 2. Since four runs were performed, with each burn rate category achieved at least once, is further testing required? What if the third test had been performed with the air setting fully open and it fell into Category 2?"

"Although four test runs were performed and each burn rate category was achieved, it is not acceptable to use one test run to meet two burn rate categories. In this case, the third test run would be acceptable to fulfill the requirements for Category 3 or Category 4, but not both. The laboratory will be required to perform one more test run in either Category 3 or Category 4. The manufacturer may request that EPA waive the requirement for a Category 3 burn rate upon demonstration that this burn rate category cannot be achieved. A minimum of four test runs are required on all test series, therefore in the second case, at least one more run will be required with the air inlet fully open."
